1. CONNECTION TO PROGRAMMING INTERFACE

1.1. INTRODUCTION

Configuring Core Touch Panel with CoreOS 4.0 operating system are handled via built-in web server. For this, you need to connect your computer and Touch Panel to the same local area network.

-  No internet connection is required while operating programming interface.

1.2. CONNECTING TOUCH PANEL TO NETWORK

Core Touch Panels with CoreOS 4.0. operating system have dual Ethernet Network Interface. Both Ethernet Interface (ETH0, ETH1) use DHCP by default. Follow the steps below to log-in Programming Interface.

Connect to Network with DHCP Server:

- Connect ETH0 or ETH1 Ethernet Network of Touch Panel to the network.
- Go to Touch Panel UI > Settings > App Settings and then get IP Address of Touch Panel.
- Connect your computer to the same network.
- Enter IP address of Touch Panel to web browser.

Connect to Network without DHCP Server:

- In this case, Touch Panel needs to have a Static IP Address. Only ETH0 Ethernet Interface is able to be configured with Static IP configuration, so use ETH0 Ethernet Interface to connect to network.
- Go to Touch Panel UI > Settings > App Settings. Tap 4 times to App Version to open Integrator Settings (hidden menu). Enter Integrator Password in pop-up window.

-  Default Integrator Password is 1234.

- Tap Integrator Menu. Select Static IP, and then assign a free IP Address to the Touch Panel.
- Connect your computer to the same network and then assign another free static IP Address to your computer.
- Enter IP Address of Touch Panel to web browser.

-  You can directly connect your computer and Touch Panel in case there is not any network established. Then follow steps above to reach Programming Interface

1.3. UPDATING TOUCH PANEL

Before starting the configuration of Touch Panel, it should be updated to the latest version.

If Touch Panel has internet Access, via On Screen;

- Go to Settings > App Settings
- A warning will appear if there is a new update
- By pressing “UPDATE” button, new version will be downloaded from Core Cloud and automatically uploaded to the Touch Panel

1.4. LOG-IN TO INTERFACE

After completing network configuration, open a web browser in your computer and enter IP Address of Touch Panel. Then you will reach log-in page of CoreOS 4.0 operating system.

Enter Username and Password to log-in to Interface. Default username and password is below. You can change username and password after log-in to Interface.

Default Username : webAdmin

Default Password : wa1234

You can change language of Programming Interface by clicking button in the upper right corner of log-in page. Supported languages are English and Turkish.

If you can not log-in, delete cookies and clear browsing data in history of web-browser and try to log-in again.

1.5. PROGRAMMING INTERFACE OVERVIEW

(A). Programming Interface Menu:

Menus related to configuration of all parameters of Touch Panel.

- Dashboard: The menu that shows general information about Touch Panel and summary of configured parameters.
- Devices: The menu that enables to configure accessories controlled by Touch Panel, their drivers and rooms.
- Intercom: The menu that enables to configure settings of intercom feature and intercom contacts.
- Scene & Automation: The menu that enables to configure scenes and automation rules.
- Security: The menu that enables to configure security system with connected sensors and IP Cameras.
- UI Settings: The menu that enables to configure objects in Touch Panel User Interface.
- System Settings: The menu that enables to configure general system settings of Touch Panel.

(B). Programming Interface Shortcuts :

In this menu, there are functions such as changing password of Programming Interface, restarting Touch Panel when necessary and exit Programming Interface.

(C). Language Options:

Here are the language options of the Programming Interface. Supported languages are English and Turkish.

i Selected language is only available for Programming Interface. It does not change the language of Touch Panel User Interface.

(D). Dashboard – Summary Information:

Summary view shows number of added drivers, accessories, rooms, contacts in intercom, created scenes and IP Cameras in Touch Panel.

(E). Dashboard – General Information about Touch Panel:

Here are the general information about Touch Panel.

2. SYSTEM SETTINGS

2.1. INTRODUCTION

This section describes the configuration of settings required for installation, commissioning and maintenance of CoreOS Touch Panel. All settings described in this section can be found in System Settings menu. To access all of these settings, you must first be logged into Programming Interface. Submenus placed under System Settings are listed below:

- Import / export
- General
- Network
- RSS Settings
- Security

2.2. IMPORT/EXPORT

2.2.1 EXPORTING BACKUP

You can backup configurations in Touch Panel and restore these in another Touch Panels. To do this:

- Go to System Settings > Import / Export
- Click Export

- Select modules to backup and click export in the pop-up window.

- Backup file is saved as backup.json in your computer.

2.2.2 IMPORTING BACKUP

You can restore backup configurations to Touch Panel. To do this:

- Go to System Settings > Import / Export
- Click Import

The screenshot shows the CoreOS 4.0 Web Interface with the following details:

- Left Sidebar:** CORE SMART HOME, Dashboard, Devices, Intercom, Scene & Automation, Security, UI Settings, System Settings, Import/Export (selected), General, Network, RSS Settings, Security, Logs.
- Top Bar:** CoreOS 4.0 Web Interface, English, webAdmin.
- Import/Export Screen:**
 - Import:** A large button with a blue arrow pointing right.
 - Export:** A large button with a blue arrow pointing right.
 - Important Information:**

You can back up your data from this screen and restore it later. You can also transfer the data you have backed up to other screens. It is important to note that if the current device has data for the module you want to import, it will be deleted.

Also note that if you import drivers and accessories, scenes inside the device will be deleted even if you do not import the scenes. If you import scenes or export, you should know that even if you do not select drivers and accessories, they will also be imported / exported because the system may not function properly.

At the bottom left is the text '2020 © Core - v3.2.88'.

- Choose backup file and install in the pop-up window.

Previously configured module parameters will be deleted while restoring selected modules.

If Accessories and Drivers are exported, previously configured scenes will be deleted even scene configurations are not exported. This is because previously configured accessories and drivers will be deleted.

If scenes are imported/exported, accessories and drivers will be imported/exported to run scenes properly.

2.3. GENERAL

2.3.1 PROJECT SETTINGS

It is the section where information such as which block the Touch Panel is in, which floor, which flat it is in and the contact information of integrator commissioned the project are configured. Required information will be used to filter Touch Panels when the remote configuration feature is enabled. To do this:

- Go to System Settings > General > Project Settings
 - Enter name of the project, block name, Floor number and Flat number.
 - Enter the location of the Touch Panel.
- i** Weather information of the related location is cached from weather servers and displayed in the dashboard of the Touch Panel user interface. Internet connection is required to do this.
- Enter the name and phone number of the integrator.
 - Click save to apply changes.

The screenshot shows the 'Project Settings' page with the following fields filled in:

- Project Name: Core Labs
- Block Name: Training Center
- Floor Number: 2
- Flat Number: 1
- Location: İzmir, Türkiye
- Contact Name: Sertaç Karakoç
- Contact Phone: +90123456789

2.3.2 DEVICE SETTINGS

It is the section where information such as name of the Touch Panel, user interface language and background picture are configured. To do this:

- Go to System Settings > General > Device settings
- Enter the name of Touch Panel. Name can be considered as the name of smart home, because Touch Panel is the controller of Core Smart Home System.
- Choose the language of Touch Panel user interface.
- Click Select File and choose preferred background picture. You can blur the picture by clicking blur button. The resolution of background picture should be max **1280px X 800px for 10" and 8" Surface 1.1 Touch Panels, 1920px X 1200px for 10" Eclipse 2.0 Touch Panels and 720px X 1280px for 5" Eclipse 2.0 Touch Panels.**
- Click save to apply changes.

The screenshot shows the 'Device Settings' page with the following fields filled in:

- Device Name: Core Smart Home
- Touch Panel Language: en (English)
- Background Image: 10inc.jpeg (selected)
- Blur: Enabled (checkbox checked)

2.3.3 SCREEN SAVER SETTINGS

It is the section where Touch Panel Screen Saver settings are configured. To do this:

- Go to System Settings > General > Screen Saver
- Choose Screen Saver Time. Time can be selected between 1 – 60 minutes.
- Click save to apply changes.

2.3.4. WEATHER SETTINGS

It is the section where weather settings are configured. To do this:

- Go to System Settings > General > Weather Settings
- Choose temperature unit.
- Choose polling period of weather information from Cloud Servers.
- Click save to apply changes.

2.3.5 DOORBELL & RINGTONE SETTINGS

It is the section where doorbell and ringtone settings are configured.

To do this:

- Go to System Settings > General > Doorbell & Ringtone Settings
- Click doorbell enable button to activate doorbell function.
- Choose doorbell trigger type
 - System I/O Input
 - KNX
- Enter requested parameters according to doorbell trigger type.
- Choose doorbell ringtone.
- Choose doorbell ringtone repeat count.
- Turn on Camera Preview if you want to view selected camera when doorbell is triggered.
- Choose camera to be displayed. Note: To do this, camera must be added to Touch Panel from menu Security > IP Cameras.
- Enter the sequence of camera display when doorbell is triggered.
- Choose intercom ringtone from the list. This ringtone will play when intercom call is received.
- Click save to apply changes.

2.3.6 DATE & TIME SETTINGS

It is the section where time settings are configured. To do this:

- Go to System Settings > General > Date&Time Settings
- Choose time zone (GMT)
- Click save to apply changes.

Date Time Settings

Save

GMT

2.3.7 KNX SETTINGS

It is the section where physical address of Touch Panel in KNX Bus is configured and KNX IP Interface feature can be started or stopped.

- After any changes, click save to apply changes.
- Detailed information for KNX IP Interface feature, see [KNX IP Interface](#)

2.4 NETWORK SETTINGS

- i** Touch Panels with dual Ethernet Interfaces (ETH0, ETH1) can be connected to 2 different LAN at the same time. Thanks to this feature, home and building network can be isolated from each other in multi flat residential buildings.
- i** While ETH0 can be configured as Static and DHCP IP configuration, ETH1 is only configured as DHCP configuration.
- !** Both Ethernet Interfaces have ability to connect to internet. That's why, when both interfaces are connected to local networks, it should be specified through which local network the Touch Panel should be connected to internet.
- !** **If Both Ethernet interfaces are used, it is recommended to configure ETH0 and ETH1 IP addresses in different IP blocks**

In this section, you can determine which Ethernet interface the Touch Panel should connect to internet. To do this:

- Go to System Settings > Network
- Select which Ethernet interface you want the Touch Panel to connect to internet. Make sure that there is an internet connection in the network that your preferred interface is connected to.
- i** If there is an internet connection in both networks, internet connection will be provided from the interface you prefer.
- Click save to apply changes.

It is the section where ETH0 Ethernet network interface settings are configured. To do this:

- Go to System Settings > Network
- Choose IP Client mode (Static, DHCP)
- Enter requested parameters in case you choose Static IP.
- Click save to apply changes.

ETH0 (70:83:D5:6F:EF:A4)		ETH1 (70:83:D5:4F:EF:A4)	
Mode	Static	Mode	DHCP
IP Address	10.0.1.30	IP Address	192.168.2.39
Netmask	255.255.255.0	Netmask	255.255.255.0
Gateway	10.0.1.1	Gateway	192.168.2.1
Dns 1	8.8.8.8	Dns 1	8.8.8.8 1.1.1.1
Dns 2	8.8.4.4	Dns 2	8.8.8.8 1.1.1.1

2.5 RSS SETTINGS

It is the section where RSS Feeds settings are configured. Supported RSS headlines:

- News
- Business
- Technology
- Sports
- Economy

When the RSS feeds under these headlines are checked, they will be displayed on the RSS Widget in the dashboard of Touch Panel user interface.

The screenshot shows the CoreOS 4.0 Web Interface with the sidebar menu open. The 'RSS Settings' option is selected in the sidebar. The main content area is titled 'RSS Settings' and contains a 'Polling Period' input field set to '10 min'. Below this, there are two sections: 'News' and 'Business'. Under 'News', 'Newyork Times' is checked. Under 'Business', 'CNN' is checked. A 'Save' button is located at the top right of the content area.

To configure RSS Feed polling period:

- Go to System Settings > RSS Settings
- Enter a value to polling period.
- Click save to apply changes.

To add an RSS feed other than standard RSS feeds:

- Go to System Settings > RSS Settings
- Enter the title of RSS feed.
- Enter the URL of RSS Feed
- Click Add button
- Click save to apply changes.

The screenshot shows a 'Add A new RSS' form. At the top, it says 'Other'. Below that is a section labeled 'Add A new RSS' with fields for 'Title' (containing 'Type a title') and 'Url' (containing 'Type a url'). A blue 'Add' button is located at the bottom right of the form.

2.6 SECURITY SETTINGS

This is the section where Security System Password and Integrator Password of Touch Panel are configured.
To do this:

- Go to System Settings > Security Settings
- Enter Arm/Disarm password of Security System. (You must first activate password on Touch Panel UI. See [Security Panel Settings > Settings to be made on Touch Panel UI](#))
- Enter Panel Integrator Password. Default password is 1234
- Click save to apply changes.

The screenshot shows a 'Security Settings' page with two password input fields. The first field is labeled 'Arm/Disarm Password' and contains '....'. The second field is labeled 'Panel Integrator Password' and also contains '....'. Both fields have a small eye icon to the right for password visibility. In the top right corner, there is a blue 'Save' button with a disk icon.

3. UI SETTINGS

3.1. INTRODUCTION

Configurations of the Touch Panel user interface are made in this section. You can customize the interface by adjusting visual settings for the widgets and menus on the dashboard.

3.2. WIDGETS

Widgets are useful sections of the Touch Panel user interface that appear on the dashboard. Thanks to these widgets, user can directly access favorite devices, favorite scenes, intercom shortcuts, security panel and RSS feeds on the dashboard.

Available Widgets:

- Favorite Devices
- Favorite Scenes
- Security Panel
- Intercom Shortcuts
- RSS Feeds
- INFO (Date and Time, Weather Condition)

The screenshot shows the CoreOS 4.0 Web Interface with the URL "CoreOS 4.0 Web Interface". The left sidebar menu includes "CORE SMART HOME", "Dashboard", "Devices", "Intercom", "Scene & Automation", "Security", "UI Settings" (selected), "Widgets" (selected), "Menu Items", and "System Settings". The main content area is titled "Widgets" and displays a table of configured widgets:

Enable	Icon	Title	Type	Actions
<input checked="" type="checkbox"/>		Favorite Scenes	Scene	
<input checked="" type="checkbox"/>		Favorite Devices	Device	
<input checked="" type="checkbox"/>		Security Panel	Security	
<input checked="" type="checkbox"/>		Intercom Shortcuts	Contact	
<input checked="" type="checkbox"/>		RSS Feeds	RSS	
<input checked="" type="checkbox"/>		INFO	Info	

At the bottom left, it says "2020 © Core - v3.2.88".

3.2.1. ENABLING WIDGETS

- Go to UI Settings > Widgets
- Click the box in the Enable column which widgets you want to display on the dashboard.
- Click  button to save changes.

3.2.2. ORGANIZING VIEW ORDER OF WIDGETS

- Go to UI Settings > Widgets
- Change the order with drag and drop after click and hold  button in the actions column. INFO widget will be always shown at the top
- Click  button to save changes

3.2.3. EDITING WIDGETS

- Go to UI Settings > Widgets
- Click  button to change the title and icon of the widgets
- Change the title and icon of the widget in the pop-up window and confirm.
- Click  button to save changes

3.3. MENU ITEMS

Menus are the items displayed on the dashboard of Touch Panel user interface. From these menus, Devices, intercom system, security panel, scenes, automation recipes, concierge system and 3rd party applications installed on Touch Panel can be accessed. Unused menus can be removed from dashboard.

The screenshot shows the CoreOS 4.0 Web Interface with the title 'CoreOS 4.0 Web Interface'. On the left, there is a sidebar with various menu items: CORE SMART HOME (Dashboard, Devices, Intercom, Scene & Automation, Security, UI Settings, Widgets, Menu Items), System Settings, and a footer note '2020 © Core - v3.2.88'. The main content area is titled 'Menu Items' and contains a table with columns: Enable, Icon, Title, and Actions. The table lists seven items: Devices (house icon), Intercom (intercom icon), Security (shield icon), Scenes (TV icon), Automation (clock icon), Concierge (bed icon), and Applications (grid icon). Each item has a checked checkbox in the 'Enable' column and a three-dot 'Actions' button. A large blue circular button with an upward arrow is located at the bottom right of the table area.

Enable	Icon	Title	Actions
<input checked="" type="checkbox"/>	House icon	Devices	≡
<input checked="" type="checkbox"/>	Intercom icon	Intercom	≡
<input checked="" type="checkbox"/>	Shield icon	Security	≡
<input checked="" type="checkbox"/>	TV icon	Scenes	≡
<input checked="" type="checkbox"/>	Clock icon	Automation	≡
<input checked="" type="checkbox"/>	Bed icon	Concierge	≡
<input checked="" type="checkbox"/>	Grid icon	Applications	≡

3.3.1. ENABLING MENUS

- Go to UI Settings > Menu Items
- Click the box in the Enable column which menus you want to display on the dashboard.
- Click button to save changes

3.3.2. ORGANIZING VIEW ORDER OF MENU ITEMS

- Go to UI Settings > Menu Items
- Change the order with drag and drop after click and hold button in the actions column.
- Click button to save changes

4. DRIVERS

4.1. INTRODUCTION

Drivers are the automation interfaces to which accessories will be connected. CoreOS 4.0. operating system offers possibility to connect with many different automation interfaces. This provides the opportunity to control accessories connected to more than one automation interface on the same Touch Panel at the same time in the same user interface.

Available Drivers:

- KNX Twisted Pair
- KNXNet/IP
- System I/O
- Modbus
- Core Center (Z-Wave Gateway)
- Siemens Logo
- CoreOS Panel
- Audio Streamer
- Temperature Controller

i In order to add a new accessory to the Touch Panel, it is necessary to add the driver to which that accessory will be connected first.

4.2. ADDING NEW DRIVER

In this section, a new driver is added to Touch Panel. To do this:

- Go to Devices > Drivers
- Click  button
- Choose the driver that you want to add.
- Enter required information related to driver and click Add button.

The screenshot shows the CoreOS 4.0 Web Interface with the URL "http://192.168.1.100:8080". The left sidebar has a "CORE SMART HOME" header and categories: Dashboard, Devices (selected), Drivers, Accessories, Rooms, Intercom, Scene & Automation, Security, UI Settings, and System Settings. The main content area is titled "CoreOS 4.0 Web Interface" and "Drivers". It lists drivers with columns for Type, Description, and Actions (Edit and Delete). The listed drivers are: System I/O, KNX Twisted Pair, and KNXnet/IP (with IP address 10.0.1140:3671).

Type	Description	Actions
System I/O	-	 
KNX Twisted Pair	-	 
KNXnet/IP	10.0.1140:3671	 

4.3. EDITING DRIVERS

You can edit previously added driver's information in this section. To do this:

- Go to Devices > Drivers
- Click button of the driver you want to edit.
- You can edit information about driver in page.

4.4. DELETING DRIVER

You can delete previously added driver in this section. To do this:

- Go to Devices > Drivers
- Click button of the driver you want to delete.
- Driver will be deleted after confirming delete process in the confirmation box.

When a driver is deleted, all accessories related to this driver will be deleted.

5. ROOMS & SECTIONS

5.1. INTRODUCTION

Rooms & Sections is where smart home accessories will be displayed in Touch Panel user interface. Creating room and section with names in accordance with the physical rooms in the building/house will be beneficial for the user experience. You can give names and also icons to rooms.

i There is always a default room in Touch Panel for convenience in adding accessories, deleting rooms and so on. This room cannot be deleted, but its name and icon can be changed.

Section	Name	Accessory Count	Actions
Main Floor	Saloon	12	[Edit, Delete, Add]
Main Floor	Kitchen	6	[Edit, Delete, Add]
First Floor	Bedroom	6	[Edit, Delete, Add]
First Floor	Kids' Room	4	[Edit, Delete, Add]
Yard	Yard	7	[Edit, Delete, Add]
Yard	Winter Garden	5	[Edit, Delete, Add]

5.2. ADDING NEW SECTION

You can add sections belong to project and displayed in Touch Panel user interface. To do this:

- Go to Devices > Rooms
- Click Add Section button.
- Enter the name of the section in the pop-up window.
- Click Confirm and Save changes.

Add Section

* Section Name

Cancel **Confirm**

5.3. ADDING NEW ROOM

You can add sections belong to project and displayed in Touch Panel user interface. To do this:

- Go to Devices > Rooms
- Click Add Room button.
- Enter the name, icon and section of the room in the pop-up window.
- Click Confirm and Save changes.

5.4. EDITING ROOMS

You can edit previously added room from Touch Panel user interface. To do this:

- Go to Devices > Rooms
- Click button of the room you want to edit.
- You can edit information about room in page.

5.5. ORGANIZING ORDER VIEW OF ROOMS

The rooms you have added are displayed in the rooms list on the Touch Panel user interface. You can change the view order of any room in this section. For this:

- Go to Devices > Rooms
- You can change order of a room by drag and drop of  button placed in # column of the room.
- You will see confirmation notification after process is completed.

5.6. DELETING ROOMS

You can delete previously added room from Touch Panel user interface. To do this:

- Go to Devices > Rooms
- Click  button that of the room that you want to delete
- Click Confirm and Save changes.

 When a room is deleted, the accessories related to this room are not deleted and transferred to default room so these can be reconfigured later.

5.7. COPY ROOMS

You can copy a room you have added before, along with the devices in it. To do this:

- Go to Devices > Rooms
- Click  button of the room that you want to copy.
- New copied room is added to Touch Panel, after entering its name and confirming changes.

 By copying a room with accessories added in it, you can copy all the accessories in it at once.

5.8. ADDING ACCESSORY IN ROOM SETTINGS

You can add an accessory to previously added room. To do this:

- Go to Devices > Rooms.
- Click  button in the operations column of the room you want to add accessory to
- Here you will be redirected to Add New Accessory wizard. After entering necessary information, new accessory will be added to room.

 Adding accessory from room, can be thought of as a shortcut to the Add New Accessory wizard.

6. ACCESSORIES

6.1 INTRODUCTION

In order to control devices connected to automation interfaces of Touch Panel, it must be added as an accessory in the Programming Interface. CoreOS 4.0 operating system allows to control many different types of accessories related to different automation interfaces simultaneously on a single platform. In this way, the user experiences smooth smart home control experience.

6.2. ADDING NEW ACCESSORY

You can add many different types of accessories for the control of smart devices on Touch Panel. To do this:

- Go to Devices > Accessories
- Click  button

Icon	Name	Category	Room	Driver	Favorite	Actions
	Spot	Dimmer	Saloon	KNX Twisted Pair		  
	Gas Sensor	Sensor Gas	Kitchen	System I/O		  
	Leak Sensor	Sensor Leak	Kitchen	System I/O		  
	Motion Sensor	Sensor Motion	Saloon	System I/O		  
	Window Sensor	Sensor Window	Saloon	System I/O		  
	Back Lights	Switch	Yard	KNXnet/IP		  
	Contactor	Contactor	Yard	System I/O		  
	Front Lights	Switch	Yard	KNXnet/IP		  

- Add New Accessory wizard will appear. All accessories are easily added with information entered in this wizard in 3 steps.

The information to be entered varies according to the type of driver and accessory. Accessory based detailed information are explained in Supported Device Types section.

- In the first step, enter information such as the name of the accessory, room, the driver it is connected to, whether it is a favorite device and whether the device will appear in the user interface or not.

! You can display the accessories that user will use frequently on the dashboard of Touch Panel user interface. For this, mark accessory as favorite. Then enable Favorite Devices Widget. This will allow you to display favorite accessory in the Favorite Devices Widget in the dashboard.

! In some cases, you may want the accessory you added to be invisible in the user interface. In particular, you can mark as invisible the devices that you do not want the user's intervention to be controlled by scenes of automation triggers.

! Before adding an accessory, it is necessary to add the driver and room it is connected to.

- In the second step, select the type of the accessory and its icon. For some accessory types, the category to be displayed in the user interface is also selected.

2020 © Core - v3.2.88

Accessory types vary by driver.

- In the third step, you need to enter the necessary variables of the accessory according to the selected driver and accessory type.

- After entering the variables, you will complete adding an accessory by clicking the save button.

6.3. EDITING ACCESSORIES

In this section, you can edit information of the accessory you previously added. To do this:

- Go to Devices > Accessories
- Click button of the accessory you want to edit in the operations column.
- You can edit information of accessory on the open page.

6.4. DELETING ACCESSORIES

You can delete an accessory you have added from the Programming Interface. To do this:

- Go to Devices > Accessories
- Click button of the accessory you want to delete in the operations column.
- Click Confirm and Save changes.

6.5. COPY ACCESSORIES

You can copy an accessory you have added before, along with the information in it. To do this:

- Go to Devices > Accessories
- Click  button of the accessory that you want to copy.
- New copied accessory is added to Touch Panel, after entering its name and confirming changes.

 Copy an accessory will help you quickly add accessories, especially on devices connected to KNX Systems.

 In order to control another load with copied accessory, you need to update group address and other related information. To do this, update information of copied accessory by clicking edit button.

7. SUPPORTED ACCESSORY TYPES

7.1. SUPPORTED ACCESSORY TYPES WITH KNX DRIVERS

CoreOS 4.0 operating system provides new types of accessories to control and display many different types of data and devices in KNX Systems. Many functions available in different accessory types can be customized to support different Data Types (Data points) in KNX System. In this way, many products from different brands can be controlled and monitored by CoreOS 4.0. Touch Panels.

Supported Accessory Types with KNX Drivers:

- Switch
- Dimmer
- Tunable White
- RGBW Dimmer
- Shutter
- Advanced Thermostat (New Version)
- Thermostat/Air Conditioner (Old Version)
- Punch Button
- Binary Button
- Audio
- Motion Sensor
- Door Sensor
- Window Sensor
- Leak Sensor
- Gas Sensor
- Smoke Sensor
- Siren
- Status Display

KNX Twisted Pair and KNXNet IP drivers support same accessory types.

7.1.1. SWITCH

Switch Accessory Type allows to control and monitor On/Off Loads in KNX Systems.

COREOS TOUCH PANEL UI VIEW

In the summary view of Switch, the status of the device is displayed. You can change status by tapping control button. In order to view detailed information tap the accessory.

You can find detailed view of Switch Accessory in the left hand side.

AVAILABLE FUNSTONS

Function Name	KNX Data Point	KNX Group Address
Switch	<u>1.001 (1 Bit)</u>	<u>Read, Write</u>

ADDING A NEW SWITCH ACCESSORY

Follow the steps in Adding New Accessory section, to add new KNX – Switch Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose KNX-TP or KNXNET-IP as driver.
- In second step, choose Accessory Type as Switch.
- Choose in which category you want the accessory to be displayed in user interface. (Lights, Shutters, Climate, Generic)
- In third step, enter required information related to Switch accessory.
- Click save to apply changes.

PARAMETERS

Normally Open:

Type of relay to which the controlled load is connected

Pulse:

The duration that the controlled load stays open and then closes

FUNCTIONS

Switch:

It is the function that enables the connected load to be switched on or off. When reading and writing data, it uses the 1-Bit 1.001 data type.

Related Group Addresses:

Switch (1-Bit) Write: Data write group address to which On/Off command is sent

Switch (1-Bit) Read: Data read group address where On/Off status is monitored

7.1.2. DIMMER

Dimmer Accessory allows to control and monitor dimmable devices in KNX Systems by CoreOS Touch Panels. On/Off Control and status, brightness control and status information are controlled and monitored by this accessory type.

COREOS TOUCH PANEL UI VIEW

In the summary view of Dimmer, the status of the device is displayed. You can change brightness level via control buttons. In order to view detailed information tap the accessory.

You can find detailed view of Dimmer Accessory in the left hand side.

AVAILABLE FUNCTIONS

Function Name	KNX Data Point	KNX Group Address
Switch	1.001 (1 Bit)	Write, Read
Dimming Value	5.001(1Byte)	Write, Read

ADDING A NEW DIMMER ACCESSORY

Follow the steps in Adding New Accessory section, to add new KNX – Dimmer Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose KNX-TP or KNXNET-IP as driver.
- In second step, choose Accessory Type as Dimmer.
- In third step, enter required information and configure functions related to dimmer accessory.
- Click save to apply changes.

FUNCTIONS

Switch:

It is the function that enables the connected load to be switched on or off. When reading and writing data, it uses the 1-Bit 1.001 data point.

Related Group Addresses:

Switch (1-Bit) Write: Data write group address to which On/Off command is sent

Switch (1-Bit) Read: Data read group address where On/Off status is monitored

Dimming Value:

It is the function that allows controlling and monitoring brightness value of the connected device. It uses 5.001 1 Byte Data Type when reading and writing data.

Related Group Addresses:

Dimming Value (1-Byte) Write: Data write group address to which brightness value of load is sent

Dimming Value (1-Byte) Read: Data read group address where brightness value of load is monitored

7.1.3. SHUTTER

Shutter Accessory allows to control and monitor roller shutters and blinds in KNX Systems by CoreOS Touch Panels. Open/Close control and status, Position control and status and also slat control and status information are controlled and monitored by this device type.

COREOS TOUCH PANEL UI VIEW

In summary view, Open/Close status of shutter is monitored. You can control up,down and stop functions via shortcut control buttons. Just tap device to reach detailed view.

You can find detailed view of Shutter Accessory in the left hand side.

AVAILABLE FUNCTIONS

Function Name	KNX Data Point	KNX Group Address
Move	1.008 (1 Bit)	Write
Stop	1.007 (1 Bit)	Write
Level Percentage	5.001 (1 Byte)	Write, Read
Slat Level	5.001 (1 Byte)	Write, Read

ADDING A NEW SHUTTER ACCESSORY

Follow the steps in Adding New Accessory section, to add new KNX – Shutter Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose KNX-TP or KNXNET-IP as driver.
- In second step, choose Accessory Type as Shutter.
- In third step, enter required information and configure functions related to shutter accessory.
- Click save to apply changes.

FUNCTIONS

Move:

It is the function that enables the connected shutter to open or close. It uses 1.008 1-Bit Data Type when writing data.

Related Group Addresses:

Move (1-Bit) Write: Data write group address to which Open/Close command is sent.

Stop:

It is the function that enables the connected shutter to stop. It uses 1.007 1-Bit Data Type when writing data.

Related Group Addresses:

Stop (1-Bit) Write: Data write group address to which Stop command is sent.

Level Percentage:

It is the function that allows shutter to be opened in a certain position. When reading and writing data, it uses 5.001 1-Byte Data Type.

Related Group Addresses:

Percentage Value (1-Byte) Write: Data write group address to which the command to open the shutter at a certain position is sent

Percentage Value (1-Byte) Read: Data read group address where the current position of shutter is monitored

Slat Level :

It is the function that the slat position adjustments of the blinds are made. When reading and writing data, it uses 5.001 1-Byte Data Type.

Related Group Addresses:

Percentage Value (1-Byte) Write: Data write group address to which the command to open slat is sent

Percentage Value (1-Byte) Read: Data read group address where the current position of slat is monitored

7.1.4. ADVANCED THERMOSTAT

Advanced thermostat accessory type allows to control and monitor thermostats in KNX System by CoreOS Touch Panels. Temperature, fan speed, operation mode and control mode information are controlled and monitored by this device type.

COREOS TOUCH PANEL UI

In summary view, operation mode, room temperature and setpoint of thermostat is monitored. You can change setpoint via shortcut control buttons. Just tap device to reach detailed view.

You can find detailed view of Thermostat Accessory in the left hand side.

AVAILABLE FUNCTION GROUPS

Since many functions are supported in the advanced thermostat accessory, these functions are grouped in the Touch Panel user interface. The names of the group can be changed and unused groups can be removed from the interface.

- Temperature function group
- Operation Mode function group
- Control Mode function group
- Fan Mode function group
- U-D Vane Function group
- L-R Vane function group

Temperature function group is non-removable function group in Advanced Thermostat Device Type.

AVAILABLE FUNCTIONS

Function Name	KNX Data Point	KNX Group Address
On State	Multiple choice	Write, Read
Off State	Multiple choice	Write, Read
Room Temperature	Multiple choice	Read
Target Setpoint – Direct	Multiple choice	Write, Read
Target Setpoint – Shift 1 Byte	Multiple choice	Shift Write, Shift Read
Target Setpoint – Shift 2 Byte	Multiple choice	Shift Write, shift Read
CO2	DPT 9 (2 Byte Float)	Read
Humidity	DPT 9 (2 Byte Float)	Read
Air Quality	DPT 5 (8 Bit Unsigned 5.010)	Read
Operation mode - Auto	Multiple choice	Write, Read
Operation mode - Heat	Multiple choice	Write, Read
Operation mode - Cool	Multiple choice	Write, Read
Operation mode - Fan	Multiple choice	Write, Read
Operation mode - Dry	Multiple choice	Write, Read
Control mode - Auto	Multiple choice	Write, Read
Control mode - Comfort	Multiple choice	Write, Read
Control mode - Standby	Multiple choice	Write, Read
Control mode - Night	Multiple choice	Write, Read
Control mode - Protection	Multiple choice	Write, Read
Fan mode – Auto	Multiple choice	Write, Read
Fan mode – Lowest	Multiple choice	Write, Read
Fan mode – Lower	Multiple choice	Write, Read
Fan mode – Middle	Multiple choice	Write, Read
Fan mode – Higher	Multiple choice	Write, Read
Fan mode – Highest	Multiple choice	Write, Read
U-D Vane - Auto	Multiple choice	Write, Read
U-D Vane – Position 1	Multiple choice	Write, Read
U-D Vane – Position 2	Multiple choice	Write, Read
U-D Vane – Position 3	Multiple choice	Write, Read
U-D Vane – Position 4	Multiple choice	Write, Read
U-D Vane – Position 5	Multiple choice	Write, Read
U-D Vane – Swing	Multiple choice	Write, Read
L-R Vane - Auto	Multiple choice	Write, Read
L-R Vane – Position 1	Multiple choice	Write, Read
L-R Vane – Position 2	Multiple choice	Write, Read
L-R Vane – Position 3	Multiple choice	Write, Read
L-R Vane – Position 4	Multiple choice	Write, Read
L-R Vane – Position 5	Multiple choice	Write, Read
L-R Vane – Swing	Multiple choice	Write, Read

ADDING A NEW ADVANCED THERMOSTAT

Follow the steps in Adding New Accessory section, to add new KNX – Advanced Thermostat Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose KNX-TP or KNXNET-IP as driver.
- In second step, choose Accessory Type as Advanced Thermostat.
- In third step, add function groups and configure. To do this, click + button in function group bar and add requested groups. Then you can change their names to be displayed in Touch Panel user interface.

- Then enter requested information for functions and parameters.
- Click save to apply changes.

TEMPERATURE GROUP FUNCTIONS

ON State / OFF State Functions:

It is the function that enables thermostat to be On/Off.

i On and Off state can be programmed separately, taking into account the situation that need to send different data types to On and Off State.

i The On/Off function can be removed from thermostat accessory by deselecting function.

On State

DPT DPT 1 (1-Bit 0-1) Write .../.../... Read .../.../...

Write Value Active Value

Off State

DPT DPT 1 (1-Bit 0-1) Write .../.../... Read .../.../...

Write Value Active Value

Related Group Address and Parameters:

DPT: Type of data to be sent or received to group address

Write: Data write group address where On or Off command is sent

Read: Data read group address where On or Off command is monitored

Write Value: Value to be sent to data write group address

Active Value: Expected value in data read group address

Room Temperature Function:

It is a function that displays the instantaneous temperature value measured by thermostat.

i Considering the situations that need to monitor different data types, Room Temperature function can be programmed by reading information from different data types.

Room Temperature

DPT DPT Read .../.../...

Related Group Address and Parameters:

DPT: Type of data to be sent or received to group address

Read: Data read group address where temperature measured by thermostat is monitored

Target Setpoint Direct Function:

It is the function used to control and monitor target room temperature of the thermostat that calculate target temperature as an absolute numerical value.

i Target setpoint function can be programmed by writing and reading value with different data types, considering the situations that need to send or receive different data types.

Target Set Point Direct SetPoint

DPT: DPT 9 (2-Byte Float) Write: Read:

Min: 5 Max: 40 Step: 1

Related Group Address and Parameters:

Target Set Point (Direct): It is the control method used for thermostats that calculate target temperature as an absolute numerical value

DPT:	Type of data to be sent or received to group address
Write:	Data write group address where target temperature of thermostat is sent
Read:	Data read group address where target temperature of thermostat is monitored
Min:	Minimum temperature that can be set
Max:	Maximum temperature that can be set
Step:	Step value of increasing or decreasing target temperature

Target Setpoint Shift Function :

It is the function used to control and monitor target temperature of thermostats that calculate target temperature according to a variable shift value

Target Set Point Shift SetPoint (DPT 6 - ▾)

DPT: DPT 9 (2-Byte Float) Read:

Min: 5 Max: 40 Step: 1

Shift

Write: Read:

Related Group Address and Parameters:

Target Set Point (Shift): It is the control method used for thermostats that calculate the target temperature according to a variable shift value.

DPT:	Type of data to be sent or received to group address
Read:	Data read group address where target temperature of thermostat is monitored
Min:	Minimum temperature that can be set
Max:	Maximum temperature that can be set
Step:	Step value of increasing or decreasing target temperature
Shift Write:	Data write group address where shift value to change target temperature is sent
Shift Read:	Data read group address where shift value to change target temperature is read

CO2 Display Function:

It is the function used to monitor CO2 level.

CO2

DPT	DPT 9 (2-Byte Float)	Read	21/0/4
-----	------------------------	------	--------

Related Group Address and Parameters:

DPT: It cannot be changed. DPT 9 2 byte float by default

Read: Data read group address where CO2 measured by related device is monitored

Humidity Display Function:

It is the function used to monitor Humidity level.

Humidity

DPT	DPT 9 (2-Byte Float)	Read	21/0/2
-----	------------------------	------	--------

Related Group Address and Parameters:

DPT: It cannot be changed. DPT 9 2 byte float by default

Read: Data read group address where Humidity measured by related device is monitored

Air Quality Display Function:

It is the function used to monitor Air Quality level.

Air Quality

DPT	DPT 5 (8-Bit Unsigned)	Read	21/0/6
-----	--------------------------	------	--------

Related Group Address and Parameters:

DPT: It cannot be changed. DPT 5 8 bit unsigned 5.010 by default

Read: Data read group address where Air Quality level measured by related device is monitored

There are 3 levels shown on detailed view of advanced thermostat accessory.

- Poor (when telegram "1" received)
- Satisfactory (when telegram "2" received)
- Good (when telegram "3" received)

OPERATION MODE GROUP FUNCTIONS

It is the group that contains the functions that control the operation modes of thermostat. Includes Auto, Heat, Cool, Fan and Dry functions.

-  You can remove functions that thermostat does not support by deselecting function.
-  The name and icons of the functions displayed in user interface can be edited by integrator.

Auto Function:

It is the function that allows the thermostat to switch to auto mode.

Temperature Operation Mode +

Title Operation Mode

Auto

Title (A) Auto 

DPT DPT 5 (8-Bit Unsigned) Write .../... Read .../...

Write Value 0 Active Value 0

Related Group Address and Parameters:

Read:	Data read group address where the cool command is monitored
Write Value:	Value to be sent to data write group address
Active Value:	Expected value in data read group address

Fan Function:

It is the function that allows thermostat to switch to fan mode.

Fan

Title		Fan	
DPT	DPT 5 (8-Bit Unsigned)	Write	.../.../...
Write Value	9	Active Value	9

Related Group Address and Parameters:

DPT:	Type of data to be sent or received to group address
Write:	Data write group address where the fan command is sent
Read:	Data read group address where the fan command is monitored
Write Value:	Value to be sent to data write group address
Active Value:	Expected value in data read group address

Dry Function:

It is the function that allows thermostat to switch to dry mode.

Dry

Title		Dry	
DPT	DPT 5 (8-Bit Unsigned)	Write	.../.../...
Write Value	14	Active Value	14

Related Group Address and Parameters:

DPT:	Type of data to be sent or received to group address
Write:	Data write group address where the dry command is sent
Read:	Data read group address where the dry command is monitored
Write Value:	Value to be sent to data write group address
Active Value:	Expected value in data read group address

CONTROL MODE GROUP FUNCTIONS

It is the group that contains the functions that control and monitor control modes representing the preset temperature values in the thermostat. It includes Auto, Comfort, Standby, Economy and Building Protection functions.

 You can remove functions that thermostat does not support by deselecting function.

 The name and icons of the functions displayed in user interface can be edited by integrator.

Auto Function:

It is the function that allows thermostat to switch to auto control mode.

Related Group Address and Parameters:

DPT:	Type of data to be sent or received to group address
Write:	Data write group address where the auto command is sent
Read:	Data read group address where the auto command is monitored
Write Value:	Value to be sent to data write group address
Active Value:	Expected value in data read group address

Comfort Function:

It is the function that allows thermostat to switch to comfort control mode.

Related Group Address and Parameters:

DPT:	Type of data to be sent or received to group address
Write:	Data write group address where the comfort command is sent
Read:	Data read group address where the comfort command is monitored
Write Value:	Value to be sent to data write group address
Active Value:	Expected value in data read group address

Standby Function:

It is the function that allows thermostat to switch to standby control mode.

Standby

Title: Standby

DPT: DPT 5 (8-Bit Unsigned) Write:/... Read:/...

Write Value: 2 Active Value: 2

Related Group Address and Parameters:

DPT:	Type of data to be sent or received to group address
Write:	Data write group address where the standby command is sent
Read:	Data read group address where the standby command is monitored
Write Value:	Value to be sent to data write group address
Active Value:	Expected value in data read group address

Night Function:

It is the function that allows thermostat to switch to night control mode.

Night

Title: Night

DPT: DPT 5 (8-Bit Unsigned) Write:/... Read:/...

Write Value: 3 Active Value: 3

Related Group Address and Parameters:

DPT:	Type of data to be sent or received to group address
Write:	Data write group address where the night command is sent
Read:	Data read group address where the night command is monitored
Write Value:	Value to be sent to data write group address
Active Value:	Expected value in data read group address

Building Protection Function:

It is the function that allows thermostat to switch to building protection control mode.

Protection

Title Protection

DPT DPT 5 (8-Bit Unsigned) Write Read

Write Value 4 Active Value 4

Related Group Address and Parameters:

DPT:	Type of data to be sent or received to group address

Read:	Data read group address where the building protection command is read
Write Value:	Value to be sent to data write group address
Active Value:	Expected value in data read group address

FAN GROUP FUNCTIONS

It is the group that contains the functions that control the fan speed in the thermostat. Includes Auto, Lowest, Lower, Middle, Higher, Highest functions. In this way, a total of 5 fan speed levels and auto fan speed are supported.

- You can remove functions that thermostat does not support by deselecting function.
- The name and icons of the functions displayed in user interface can be edited by integrator.

Auto Function:

It is the function that allows thermostat to switch to auto fan speed.

Temperature Operation Mode Control Mode Fan Mode

Title Fan Mode

Write:	Data write group address where the middle fan speed command is sent
Read:	Data read group address where the middle fan speed command is read
Write Value:	Value to be sent to data write group address
Active Value:	Expected value in data read group address

Higher Fan Speed Function:

It is the function that allows thermostat to switch to higher fan speed.

Higher

Title	 Higher	
DPT	DPT 5 (8-Bit Unsigned)	Write <input type="text" value=".../.../..."/> Read <input type="text" value=".../.../..."/>
Write Value	<input type="text" value="80"/>	Active Value <input type="text" value="80"/>

Related Group Address and Parameters:

DPT:	Type of data to be sent or received to group address
Write:	Data write group address where the higher fan speed command is sent
Read:	Data read group address where the higher fan speed command is read
Write Value:	Value to be sent to data write group address
Active Value:	Expected value in data read group address

Highest Fan Speed Function:

It is the function that allows thermostat to switch to highest fan speed.

Highest

Title	 Highest	
DPT	DPT 5 (8-Bit Unsigned)	Write <input type="text" value=".../.../..."/> Read <input type="text" value=".../.../..."/>
Write Value	<input type="text" value="100"/>	Active Value <input type="text" value="100"/>

Related Group Address and Parameters:

DPT:	Type of data to be sent or received to group address
Write:	Data write group address where the highest fan speed command is sent
Read:	Data read group address where the highest fan speed command is read
Write Value:	Value to be sent to data write group address
Active Value:	Expected value in data read group address

U-D VANE AND L-R VANE FUNCTIONS

It is the group that contains the functions that control vanes of air conditioner. Includes Auto, Position 1, Position 2, Position 3, Position 4, Position 5 and Swing functions.

-  You can remove functions that air conditioner does not support by deselecting function.
-  The name and icons of the functions displayed in user interface can be edited by integrator.

7.1.5. PUNCH BUTTON

Punch Button Accessory is used to send a single data to a predetermined group address in KNX Systems. Mostly, it is used to run a KNX scene, to open a trigger-oriented garage door and similar applications.

COREOS TOUCH PANEL UI VIEW

In summary view, name and icon of the device is displayed. Only monitor acknowledge when data is sent, because there is not any status related to this accessory. Just tap device to reach detailed view.

AVAILABLE FUNCTIONS

Function Name	KNX Data Point	KNX Group Address
Punch Button	Multiple Choise	Write

ADDING A NEW PUNCH BUTTON ACCESSORY

Follow the steps in Adding New Accessory section, to add new KNX – Punch Button Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose KNX-TP or KNXNET-IP as driver.
- In second step, choose Accessory Type as Punch Button.
- Choose in which category you want the accessory to be displayed in user interface. (Lights, Shutters, Climate, Generic)
- In third step, enter required information and configure functions related to Punch Button accessory.
- Click save to apply changes.

The screenshot shows the CoreOS 4.0 Web Interface with a sidebar on the left containing links for Dashboard, Devices, Drivers, Accessories (selected), Rooms, Intercom, Scene & Automation, Security, UI Settings, and System Settings. The main area is titled 'Accessory Add' and shows a three-step wizard. Step 1: 'Enter device name, room and driver' (DPT selected). Step 2: 'Select category'. Step 3: 'Configure device details' (Punch Button selected, DPT, Address, Value fields shown). A 'Save' button is at the bottom right. The status bar at the bottom left says '2020 © Core - v3.2.88'.

FUNCTIONS

Punch Button:

It is the function where you can send a single data to a KNX group address.

Related Group Address:

DPT:

Type of data to be sent or received to group address

Address:

Group Address to which data will be sent

Value:

Value to be sent to group address

7.1.6. BINARY BUTTON

Binary Button Accessory Type is used to send data with different data types to two different pre-determined group addresses. Mostly it is used to control multiple lighting or shutter devices controlled in a single group address.

COREOS TOUCH PANEL UI

In summary view, name and icon of the device is displayed. Only monitor acknowledge when data is sent, because there is not any status related to this accessory. Just tap device to reach detailed view.

In detail view, 2 keypads placed to send different functions.

AVAILABLE FUNCTIONS

Function Name	KNX Data Point	KNX Group Address
On Button	Multiple Choice	Write
Off Button	Multiple Choice	Write

ADDING A NEW BINARY BUTTON ACCESSORY

Follow the steps in Adding New Accessory section, to add new KNX – Binary Button Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose KNX-TP or KNXNET-IP as driver.
- In second step, choose Accessory Type as Binary Button.
- Choose in which category you want the accessory to be displayed in user interface. (Lights, Shutters, Climate, Generic)
- In third step, enter required information and configure functions related to binary button accessory.
- Click save to apply changes.

FUNCTIONS

On Button:

It is the function where you can send a single data to a KNX group address.

Related Group Address:

7.1.7. SENSOR

Sensor Accessory allows to monitor status of digital security sensors connected to KNX Systems. KNX Sensor supports 6 different sensor types. These are motion, door, window, leak, gas and smoke sensors.

COREOS TOUCH PANEL UI VIEW

KNX Sensor Accessory type is displayed in security menu of user interface. The sensor's name, icon, arming status and trigger status are displayed.

AVAILABLE FUNCTIONS

Function Name	KNX Data Point	KNX Group Address
Sensor	Multiple Choice	Read

ADDING A NEW SENSOR ACCESSORY

Follow the steps in Adding New Accessory section, to add new KNX – sensor Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose KNX-TP or KNXNET-IP as driver.
- In second step, choose Accessory Type as one of the sensor types.
- In third step, enter required information and configure functions related to sensor accessory.
- Click save to apply changes.

7.1.8. STATUS DISPLAY

Status Display Accessory is used to display a KNX data such as outdoor temperature, humidity, brightness level, text etc.

In summary view, name, icon and status of the device is displayed. Just tap device to reach detailed view.

AVAILABLE FUNCTIONS

Function Name	KNX Data Point	KNX Group Address
Status Display	Multiple Choice	Read

ADDING A NEW STATUS DISPLAY ACCESSORY

Follow the steps in Adding New Accessory section, to add new KNX – Status Display Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose KNX-TP or KNXNET-IP as driver.
- In second step, choose Accessory Type as Status Display.
- In third step, enter required information and configure functions related to accessory.
- Click save to apply changes.

The screenshot shows the CoreOS 4.0 Web Interface with the title "CoreOS 4.0 Web Interface". On the left, there is a sidebar with various menu items: CORE SMART HOME, Dashboard, Devices, Drivers, Accessories (selected), Rooms, Intercom, Scene & Automation, Security, UI Settings, and System Settings. The main content area is titled "Accessory Add" and is currently at "Step 1: Enter device name, room and driver". It shows a form with fields: DPT (set to "DPT 1 (1-Bit 0-1)"), Read (set to "...,f,f..."), and two status text fields: "(1) status text" (set to "On") and "(0) status text" (set to "Off"). A "Save" button is located in the top right corner of the form. At the bottom left of the main content area, it says "2020 © Core - v3.2.88".

PARAMETERS

Status Text: The text that will be displayed when the expected data value received

FUNCTIONS

Status Display:

It is the function that monitors the status text.

Related Group Address:

DPT:

Read:

Type of data to be sent or received to group address
Group address to monitor the status

7.1.9. RGBW DIMMER

RGBW Dimmer Accessory allows to control and monitor RGBW devices in KNX Systems by CoreOS Touch Panels. Central On/Off Control and status informations, central brightness control and status informations, color control with color wheel are controlled and monitored by this accessory type.

COREOS TOUCH PANEL UI VIEW

In summary view, brightness status of device is monitored. Just tap device to reach detailed view.

You can find detailed view of RGBW Dimmer Accessory in the left hand side. Central on/off and central brightness control and status information and changing brightness value in form of drag and drop are displayed and controlled under this function

You can find detailed view of RGBW Dimmer Color function group in the left hand side. The Color Wheel and White light brightness value, are displayed and controlled under this function

AVAILABLE FUNCTIONS

Function Name	KNX Data Point	KNX Group Address
Switch	1.001 (1 Bit)	Write, Read
Dimming Value	5.001(1Byte)	Write, Read

ADDING A NEW RGBW DIMMER ACCESSORY

Follow the steps in Adding New Accessory section, to add new KNX – RGBW Dimmer Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose KNX-TP or KNXNET-IP as driver.
- In second step, choose Accessory Type as RGBW Dimmer.
- In third step, enter required information and configure functions related to RGBW Dimmer accessory.
- Click save to apply changes.

FUNCTIONS

Switch:

It is the function that enables the connected load to be switched on or off. When reading and writing data, it uses the 1-Bit 1.001 data point.

Related Group Addresses:

Switch (1-Bit) Write: Data write group address to which On/Off command is sent

Switch (1-Bit) Read: Data read group address where On/Off status is monitored

Dimming Value:

It is the function that allows controlling and monitoring brightness value of the connected device. It uses 5.001 1 Byte Data Type when reading and writing data.

Related Group Addresses:

Dimming Value (1-Byte) Write: Data write group address to which brightness value of load is sent

Dimming Value (1-Byte) Read: Data read group address where brightness value of load is monitored

7.1.10. AUDIO

Audio Accessory allows to control and monitor Audio devices in KNX Systems by CoreOS Touch Panels. Play/pause, volume, previous track, next track, shuffle, repeat, current track, album, artist, playlist controls and status informations are controlled and monitored by this accessory type.

COREOS TOUCH PANEL UI VIEW

In summary view, playing or paused status of device is monitored. Just tap device to reach detailed view.

You can find detailed view of Audio function group in the left hand side. Play/pause, volume, previous track, next track, shuffle, repeat control and current track name, album, artist and play list informations are displayed and controlled under this function

AVAILABLE FUNCTIONS

Fonksiyon Adı	KNX Data Point	KNX Grup Adresi
Play (1:Play, 0:Pause)	1.001 (1 Bit)	Write, Read
Volume	5.001(1Byte)	Write, Read
Mute (1:Mute, 0:Unmute)	1.001 (1 Bit)	Write, Read
Previous	1.001 (1 Bit)	Write
Next	1.001 (1 Bit)	Write
Current Track	16.000 (14 Byte)	Read
Current Album	16.000 (14 Byte)	Read
Current Artist	16.000 (14 Byte)	Read
Current Playlist	16.000 (14 Byte)	Read
Shuffle (1:Mix, 0:No Mix)	1.001 (1 Bit)	Write, Read
Repeat (1:Repeat, 0:No Repeat)	1.001 (1 Bit)	Write, Read

ADDING A NEW AUDIO ACCESSORY

Follow the steps in Adding New Accessory section, to add new KNX – Audio Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose KNX-TP or KNXNET-IP as driver.
- In second step, choose Accessory Type as Audio.
- In third step, enter required information and configure functions related to Audio accessory.
- Click save to apply changes.

The screenshot shows the CoreOS 4.0 Web Interface with the 'Accessories' tab selected in the sidebar. The main area displays configuration for a new KNX Audio Accessory. It includes fields for 'Play (1-bit -> 1:Play, 0:Pause)', 'Volume (1-byte)', 'Mute (1-bit -> 1:Mute, 0:Unmute)', 'Previous (1-bit)', and 'Next (1-bit)'. Each function has 'Write' and 'Read' fields and a 'Write Value' input field set to '1'.

FUNCTIONS

Play (1-bit -> 1:Play, 0:Pause):

It is the function that allows the current track to be played or paused. When reading and writing data, it uses the 1-Bit 1.001 data point.

Related Group Addresses:

Play (1-Bit) Write: Data write group address to which Play/Pause command is sent

Play (1-Bit) Read: Data read group address where Play/Pause status is monitored

Volume (1 Byte):

It is the function that allows changing volume level. When reading and writing data, it uses the 1-Byte 5.001 data point.

Related Group Addresses:

Volume (1-Byte) Write: Data write group address to which volume level command is sent

Volume (1-Byte) Read: Data read group address where volume level status is monitored

Mute (1-bit -> 1:Mute, 0:Unmute):

It is the function that allows the volume to be muted or unmuted. When reading and writing data, it uses the 1-Bit 1.001 data point.

Related Group Addresses:

Mute (1-Bit) Write: Data write group address to which Mute/Unmute command is sent

Mute (1-Bit) Read: Data read group address where Mute/Unmute status is monitored

Previous (1-bit):

It is the function that allows to skip to the previous track. When writing data, it uses the 1-Bit 1.001 data point.

Related Group Addresses:

Previous (1-Bit) Write: Data write group address to which previous track command is sent

Next (1-bit):

It is the function that allows to skip to the next track. When writing data, it uses the 1-Bit 1.001 data point.

Related Group Addresses:

Next (1-Bit) Write: Data write group address to which next track command is sent

Current Track (14-byte):

It is the function that allows to show the current track name. When reading data, it uses the 14-Byte 16.000 data point.

Related Group Addresses:

Current Track (14-Byte) Read: Data read group address where current track name is monitored

Current Album (14-byte):

It is the function that allows to show the current album name. When reading data, it uses the 14-Byte 16.000 data point.

Related Group Addresses:

Current Album (14-Byte) Read: Data read group address where current album name is monitored

Current Artist (14-byte):

It is the function that allows to show the current artist name. When reading data, it uses the 14-Byte 16.000 data point.

Related Group Addresses:

Current Artist (14-Byte) Read: Data read group address where current artist name is monitored

Current Playlist (14-byte):

It is the function that allows to show the current playlist name. When reading data, it uses the 14-Byte 16.000 data point.

Related Group Addresses:

Current Playlist (14-Byte) Read: Data read group address where current playlist name is monitored

Shuffle (1-bit -> 1:Mix, 0:No Mix):

It is the function that allows the playlist to be played shuffled or sequentially. When reading and writing data, it uses the 1-Bit 1.001 data point.

Related Group Addresses:

Shuffle (1-Bit) Write: Data write group address to which Mix/No Mix command is sent

Shuffle (1-Bit) Read: Data read group address where Mix/No Mix status is monitored

Repeat (1-bit -> 1:Repeat, 0:No Repeat):

It is the function that allows the current playlist to be played repeatedly or without repeating. When reading and writing data, it uses the 1-Bit 1.001 data point.

Related Group Addresses:

Repeat (1-Bit) Write: Data write group address to which Repeat/No Repeat command is sent

Repeat (1-Bit) Read: Data read group address where Repeat/No repeat status is monitored

7.1.11. SIREN

Siren accessory allows to control siren connected to a knx switch actuator by triggered security sensors and deactivated alarm automatically. When a sensor activates alarm siren becomes on and when alarm is deactivated it becomes off. This accessory is invisible on Touch Panel UI.

AVAILABLE FUNSTONS

Function Name	KNX Data Point	KNX Group Address
Switch	1.001 (1 Bit)	Read, Write

ADDING A NEW SIREN ACCESSORY

Follow the steps in Adding New Accessory section, to add new KNX – Siren Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose KNX-TP or KNXNET-IP as driver.
- In second step, choose Accessory Type as Siren.
- In third step, enter required information related to Siren accessory.
- Click save to apply changes.

Switch (1-Bit) Write: Data write group address to which On/Off command is sent

Switch (1-Bit) Read: Data read group address where On/Off status is monitored

7.2. SUPPORTED ACCESSORY TYPES WITH SYSTEM I/O DRIVER

CoreOS 4.0 operating system includes new accessory types to control and monitor many different types of loads by Touch Panel built-in digital inputs and outputs.

Supported Accessory Types with System I/O Driver:

Accessory Types Related with Outputs:

- Switch
- Contactor
- Water valve
- Gas valve
- Elevator
- Electrical Device
- Siren

Accessory Types Related with Digital Inputs:

- Motion Sensor
- Door Sensor
- Window sensor
- Leak Sensor
- Gas Sensor
- Smoke Sensor

7.2.1. SENSOR

Sensor Accessory allows to monitor status of digital security sensors connected to digital inputs of Touch Panel. Sensor supports 6 different sensor types. These are motion, door, window, leak, gas and smoke sensors.

COREOS TOUCH PANEL UI VIEW

System I/O Sensor Accessory type is displayed in security menu of user interface. The sensor's name, icon, arming status and trigger status are displayed.

ADDING A NEW SENSOR ACCESSORY

Follow the steps in Adding New Accessory section, to add new System I/O – sensor Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose System I/O as driver.
- In second step, choose Accessory Type as one of the sensor types.
- In third step, enter required information and configure functions related to sensor accessory.
- Click save to apply changes.

Arm Away:	Arming the sensor when security system switch to arm away mode
Arm Stay:	Arming the sensor when security system switch to arm stay mode

Gas, Smoke and Leak sensors are always armed (24/7)

Entry delay of Gas, Smoke and Leak sensors are always 0sec.

7.2.2. SWITCH

Switch Accessory type allows loads connected to Touch Panel built-in I/O to be controlled and monitored by CoreOS operating system. System I/O outputs support 7 different load types. These are switch, contactor, water valve, gas valve, siren, electrical device and elevator.

COREOS TOUCH PANEL UI VIEW

System I/O Switch Accessory type is displayed in the user interface in the category determined by the integrator. The name, icon and status of load are displayed.

ADDING A NEW SYSTEM I/O SWITCH ACCESSORY

Follow the steps in Adding New Accessory section, to add new System I/O – Switch Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose System I/O as driver.
- In second step, choose Accessory Type as switch, elevator, electrical device, contactor, water valve, gas valve or siren.
- Choose in which category you want the accessory to be displayed in user interface. (Lights, Shutters, Climate, Generic)
- In third step, enter required information and configure functions related to switch accessory.
- Click save to apply changes.

PARAMETERS

Output Number:

Number indicating which output of Touch Panel the switch is connected to

Normally Open:

Switch connection type

Pulse:

The duration that the controlled load stays open and then closes

7.3. SUPPORTED ACCESSORY TYPES WITH MODBUS DRIVER

CoreOS 4.0 operating system includes accessory types to control and monitor different types of loads in the Modbus protocol via RS485 input

Supported Accessory Types with Modbus Driver:

- Switch
- Advanced Thermostat
- Motion Sensor
- Door Sensor
- Window sensor
- Leak Sensor
- Gas Sensor
- Smoke Sensor

7.3.1. SENSOR

Sensor Accessory allows to monitor status of digital security sensors connected to Modbus system. Modbus Sensor supports 6 different sensor types. These are motion, door, window, leak, gas and smoke sensors.

COREOS TOUCH PANEL UI VIEW

Modbus Sensor Accessory type is displayed in security menu of user interface. The sensor's name, icon, arming status and trigger status are displayed.

ADDING A NEW MODBUS SENSOR ACCESSORY

Follow the steps in Adding New Accessory section, to add new Modbus – sensor Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose Modbus as driver.
- In second step, choose Accessory Type as one of the sensor types.
- In third step, enter required information and configure functions related to sensor accessory.
- Click save to apply changes.

The screenshot shows the CoreOS 4.0 Web Interface's 'Accessory Add' process at Step 1. The left sidebar includes 'CORE SMART HOME' and categories like 'Dashboard', 'Devices', 'Drivers', 'Accessories' (selected), 'Rooms', 'Intercom', 'Scene & Automation', 'Security', 'UI Settings', and 'System Settings'. The main area has a header 'CoreOS 4.0 Web Interface' and 'Accessory Add'. It shows a progress bar with Step 1 (checked) and Step 2 (unchecked). Step 1 is titled 'Enter device name, room and driver' and contains fields for 'Device Address' (1), 'Address Type' (Coil), 'Register Address' (1), and 'Tripped Value' (1). A 'Save' button is in the top right. The bottom left of the interface shows the text '2020 © Core - v3.2.88'.

PARAMETERS

Device Address:
Address Type:
Register Address:
Tripped Value:

Modbus device address
Modbus device address type
Modbus device register address
The data that sensor will send to the system when it is tripped

7.3.2. SWITCH

Switch Accessory type allows loads in the Modbus system to be controlled and monitored by CoreOS operating system.

COREOS TOUCH PANEL UI VIEW

Modbus Switch Accessory type is displayed in the user interface in the category determined by the integrator. The name, icon and status of load are displayed.

ADDING A NEW MODBUS SWITCH ACCESSORY

Follow the steps in Adding New Accessory section, to add new Modbus – Switch Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose Modbus as driver.
- In second step, choose Accessory Type as switch
- In third step, enter required information and configure functions related to switch accessory.
- Click save to apply changes.

PARAMETERS

Device Address:	Modbus device address
Address Type:	Modbus device address type
Register Address:	Modbus device register address
On Value:	The data to be sent to Modbus system to turn on the load
Off Value:	The data to be sent to Modbus system to turn off the load

7.3.3. ADVANCED THERMOSTAT

Advanced thermostat accessory allows modbus thermostats to be controlled and monitored by CoreOS operating system. Temperature information, fan speed, operation mode and control mode in these devices are controlled and monitored by advanced thermostat accessory.

COREOS TOUCH PANEL UI VIEW

In summary view, operation mode and room temperature of thermostat is monitored. Just tap device to reach detailed view.

You can find detailed view of Thermostat Accessory in the left hand side.

AVAILABLE FUNCTION GROUPS

Since many functions are supported in the advanced thermostat accessory, these functions are grouped in the Touch Panel user interface. The names of the group can be changed and unused groups can be removed from the interface.

- Temperature function group
- Operation Mode function group
- Control Mode function group
- Fan Mode function group

Temperature function group is non-removable function group in Advanced Thermostat Device Type.

ADDING A NEW ADVANCED THERMOSTAT

Follow the steps in Adding New Accessory section, to add new Modbus – Advanced Thermostat Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose Modbus as driver.
- In second step, choose Accessory Type as Advanced Thermostat.
- In third step, add function groups and configure. To do this, click + button in function group bar and add requested groups. Then you can change their names to be displayed in Touch Panel user interface.

The screenshot shows the CoreOS 4.0 Web Interface with the following details:

- Left Sidebar:** CORE SMART HOME menu with options: Dashboard, Devices, Drivers, Accessories, Rooms, Intercom, Scene & Automation, Security, UI Settings, and System Settings.
- Header:** CoreOS 4.0 Web Interface, English, webAdmin.
- Wizard Progress:** Step 1 (Enter device name, room and driver) is completed. Step 2 (Select category) is completed. Step 3 (Configure device details) is in progress.
- Form Fields (Step 3):**
 - Device Address: 1
 - Address Type: Holding Register
 - Register Address: 1
 - On Value: 1
 - Off Value: 0
- Buttons:** Save, Back.
- Footer:** 2020 © Core - v3.2.88

TEMPERATURE GROUP FUNCTIONS

DEVICE ADDRESS

PARAMETERS

Device Address: Modbus device address

ON/OFF STATE

It is the function used to turn the thermostat on and off.

PARAMETERS

Address Type:

Modbus device address type

Register Address:

Modbus device register address

On Value:

The data to be sent to Modbus system to turn on the thermostat

Off Value:

The data to be sent to Modbus system to turn off the thermostat

The screenshot shows a programming interface with two main sections:

- Room Temperature:** A configuration panel with three fields:
 - Address Type: Holding Register
 - Register Address: 40002
 - Factor: 10
- Set Temperature:** A configuration panel with two fields:
 - Register Address: 40003
 - Factor: 10

ROOM TEMPERATURE:

It is the function that monitors the room temperature measured by the thermostat

PARAMETERS

Address Type:	Modbus device address type
Register Address:	Modbus device register address used to monitor room temperature
Factor:	The multiplier of the value read by the thermostat

SET TEMPERATURE:

It is the function that adjusts the target set temperature value of the thermostat

PARAMETERS

Register Address:	Modbus device register address used to control and monitor target setpoint temperature
Factor:	The multiplier of the value read by the thermostat

OPERATION MODE GROUP FUNCTIONS

It is the group that contains the functions that control the operation modes of thermostat. Includes Auto, Heat, Cool, Fan and Dry functions.

You can remove functions that thermostat does not support by deselecting function.

The name and icons of the functions displayed in user interface can be edited by integrator.

PARAMETERS

Data Type:	Modbus thermostat operation mode address type
Register Address:	Modbus thermostat operation mode register address
Active Value:	The data to be sent to Modbus system to activate related operation mode

CONTROL MODE GROUP FUNCTIONS

It is the group that contains the functions that control and monitor control modes representing the preset temperature values in the thermostat. It includes Auto, Comfort, Standby, Economy and Building Protection functions.

 You can remove functions that thermostat does not support by deselecting function.

 The name and icons of the functions displayed in user interface can be edited by integrator.

PARAMETERS

Data Type:	Modbus thermostat control mode address type
Register Address:	Modbus thermostat control mode register address
Active Value:	The data to be sent to Modbus system to activate related control mode

FAN GROUP FUNCTIONS

It is the group that contains the functions that control the fan speed in the thermostat. Includes Auto, Lowest, Lower, Middle, Higher, Highest functions. In this way, a total of 5 fan speed levels and auto fan speed are supported.

 You can remove functions that thermostat does not support by deselecting function.

 The name and icons of the functions displayed in user interface can be edited by integrator.

PARAMETERS

Data Type:	Modbus thermostat fan speed address type
Register Address:	Modbus thermostat fan speed register address
Active Value:	The data to be sent to Modbus system to activate related fan speed

7.4. COREOS PANEL DRIVER

CoreOS Panel driver is used to copy and import the accessories of another configured Touch Panel on the same network. Thus, the already configured accessories are automatically added to the Touch Panel. When a command is given to the accessories connected to the CoreOS Panel driver, this command is sent to the copied Touch Panel first, and the copied Touch Panel transfers the necessary command to the system.

7.5. CORE CENTER DRIVER

CoreOS 4.0. operating system provides the opportunity to control and monitor the loads connected to the core center device over the network, via core center driver. When the Core Center driver is added, it automatically imports the accessories connected to the core center device.

7.6. SUPPORTED ACCESSORY TYPES WITH SIEMENS LOGO DRIVER

CoreOS 3.0 operating system includes new accessory types to control and monitor many different types of loads by digital inputs and outputs of Siemens Logo device.

Supported Accessory Types with Siemens Logo Driver:

Accessory Types Related with Outputs:

- Switch
- Shutter
- Contactor
- Water valve
- Gas valve
- Elevator
- Electrical Device
- Siren

Accessory Types Related with Digital Inputs:

- Motion Sensor
- Door Sensor
- Window sensor
- Leak Sensor
- Gas Sensor
- Smoke Sensor

7.6.1. SENSOR

Sensor Accessory allows to monitor status of digital security sensors connected to digital inputs of Siemens Logo device. Sensor supports 6 different sensor types. These are motion, door, window, leak, gas and smoke sensors.

COREOS TOUCH PANEL UI VIEW

Siemens Logo Sensor Accessory type is displayed in security menu of user interface. The sensor's name, icon, arming status and trigger status are displayed.

ADDING A NEW SIEMENS LOGO SENSOR ACCESSORY

Follow the steps in Adding New Accessory section, to add new Siemens Logo – Sensor Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose Siemens Logo as driver.
- In second step, choose Accessory Type as one of the sensor types.
- In third step, enter required information and configure functions related to sensor accessory.
- Click save to apply changes.

The screenshot shows the CoreOS 4.0 Web Interface with the title "CoreOS 4.0 Web Interface". On the left, there's a sidebar with "CORE SMART HOME" and various menu items: Dashboard, Devices, Drivers, Accessories (selected), Rooms, Intercom, Scene & Automation, Security, UI Settings, and System Settings. The main area is titled "Accessory Add" and shows a progress bar with three steps: Step 1 (Enter device name, room and driver), Step 2 (Select category), and Step 3 (Configure device details). Step 1 is completed with a checkmark. Step 2 has a dropdown menu "Select Input Number" open. Step 3 shows configuration options for a Siemens Logo sensor, including "Normally Open" (on), "Entry Delay" (button with "Enter Entry Delay" placeholder), "Arm Away" (on), and "Arm Stay" (on). A "Save" button is at the bottom right.

PARAMETERS

Input Number:

Number indicating which digital input of Siemens Logo the sensor is connected to

Normally Open:

Sensor connection type

Entry Delay:

Time to switch to violation state from the moment the sensor is armed and triggered

Arm Away:

Arming the sensor when security system switches to arm away mode

Arm Stay:

Arming the sensor when security system switches to arm stay mode

Gas, Smoke and Leak sensors are always armed (24/7)

Entry delay of Gas, Smoke and Leak sensors are always 0sec.

7.6.2. SWITCH

Switch Accessory type allows loads connected to Siemens Logo Outputs to be controlled and monitored by CoreOS operating system. Siemens Logo outputs support 7 different load types. These are switch, contactor, water valve, gas valve, siren, electrical device and elevator.

COREOS TOUCH PANEL UI VIEW

Siemens Logo Switch Accessory type is displayed in the user interface in the category determined by the integrator. The name, icon and status of load are displayed.

ADDING A NEW SIEMENS LOGO SWITCH ACCESSORY

Follow the steps in Adding New Accessory section, to add new System I/O – Switch Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose System I/O as driver.
- In second step, choose Accessory Type as switch, elevator, electrical device, contactor, water valve, gas valve or siren.
- Choose in which category you want the accessory to be displayed in user interface. (Lights, Shutters, Climate, Generic)
- In third step, enter required information and configure functions related to switch accessory.
- Click save to apply changes.

The screenshot shows the CoreOS 4.0 Web Interface with the 'Accessories' menu item selected in the sidebar. The main page title is 'Accessory Add' and it shows 'Step 1' with the sub-instruction 'Enter device name, room and driver'. It includes fields for 'Output Number' (dropdown), 'Normally Open' (switch), and 'Pulse' (switch). Step 2 is shown as 'Select category'. A 'Save &' button is at the bottom right. The sidebar also lists 'Dashboard', 'Devices', 'Drivers', 'Intercom', 'Scene & Automation', 'Security', 'UI Settings', and 'System Settings'.

PARAMETERS

Output Number:	Number indicating which output of Siemens Logo the switch is connected to
Key Control:	Function to control of the load with the mechanical switch
Normally Open:	Switch connection type
Pulse:	The duration that the controlled load stays open and then closes

7.6.3. SHUTTER

Shutter Accessory allows to control roller shutters connected to Siemens Logo device by CoreOS Touch Panels. Open/Close control and status information are controlled and monitored by this device type.

COREOS TOUCH PANEL UI VIEW**ADDING A NEW SIEMENS LOGO SHUTTER ACCESSORY**

Follow the steps in Adding New Accessory section, to add new Siemens Logo – Shutter Accessory:

- Go to Add a new Accessory Wizard.
- In first step, enter accessory name, icon, room and another information. Choose Siemens Logo as driver.
- In second step, choose Accessory Type as Shutter.
- In third step, enter required information and configure functions related to shutter accessory.
- Click save to apply changes.

8. SCENES

8.1. INTRODUCTION

Scenes are batch operations where multiple actions of multiple accessories can be performed with a single command. Scenes can be created and edited by the end user from Touch Panel user interface or by integrator from Programming Interface.

A scene created by integrator in programming interface has following additional features:

- The scene created by integrator may be invisible in Touch Panel user interface.
- The scene created by integrator can be non-editable from Touch Panel user interface.
- The scene created by integrator can be non-deletable from Touch Panel user interface.

Scene Structure

In CoreOS operating System, scene structure has been comprehensively arranged. Each activity performed in scene is named as Action. Actions to be performed in a scene can be initiated as soon as the scene run or after a specified delay time. For this, multiple actions is defined as Action Groups. The delay time is then determined, which determines how long after each Action Group will be performed after the scene run. In this way, multiple Actions that are initiated at different times can be performed in a single scene.

8.2 CREATING A NEW SCENE

A new scene is created in Programming Interface with Create a new Scene Wizard in 4 steps. To do this:

- Go to Scenes&Automation > Scenes
- Click button
- Create a new scene wizard will appear.

First Step

- In the first step, name, icon and the room of the scene is determined.
- Then whether the scene is a favorite, visible or invisible in user interface and whether the settings can be edited by end user is determined.
- After all, click next button to proceed.

The screenshot shows the CoreOS 4.0 Web Interface for creating a new scene. On the left, there's a sidebar with 'CORE SMART HOME' and several menu items: Dashboard, Devices, Intercom, Scene & Automation (expanded), Scenes, Triggers, Security, UI Settings, and System Settings. The main area is titled 'CoreOS 4.0 Web Interface' and shows a wizard flow with four steps: Step 1 (New Scene), Step 2 (Add/Update Action Group), Step 3 (Configure Actions), and Step 4 (Scene Detail). Step 1 is active, showing fields for 'Scene' (New Scene), 'Icon' (Icon 1), 'Room' (Saloon), and toggle switches for 'Favorite', 'Invisible', and 'Modifiable'. A 'Next >' button is at the bottom right.

Scene Wizard Step 1

Second Step

- In the second step, whether the action group is delayed or not, if there is a delay, duration of delay is determined
- Then, accessories that will perform action are selected.
- After all, click next button to proceed.

The screenshot shows the CoreOS 4.0 Web Interface for Step 2 of the scene wizard. The sidebar and top navigation are identical to the previous step. The main area shows the 'Step 2' configuration screen. It includes a 'Delayed Action' toggle switch set to 'On', and time selection fields for Hour (0), Minute (0), and Second (2). Below this, there's a table listing accessories and their actions:

Accessory	Room	Category
Spot	Saloon	Dimmer
Activate Presence Sensor	Saloon	Punch Button
Back Lights	Yard	Switch
Contactor	Yard	Contactor
Deactivate Presence Sensor	Saloon	Punch Button
Front Lights	Yard	Switch

Scene Wizard Step 2

Third Step

- In the third step, the actions of selected accessories are selected.
- If multiple actions are selected for an accessory, you can view the actions by clicking  button on Accessory.
- After all, click next button to proceed.

Scene Wizard Step 3

Fourth Step

- In the fourth step, it is decided to complete the scene or add a new action group.
- Check scene information and make changes before saving scene.
- Created action groups are listed. These action groups can be modified or deleted.
- A new action group with different delay time can be added.
- After all, click next button to proceed.

The screenshot shows the CoreOS 4.0 Web Interface with the title "CoreOS 4.0 Web Interface". On the left, there's a sidebar with "CORE SMART HOME" and several menu items: Dashboard, Devices, Intercom, Scene & Automation (expanded), Scenes, Triggers, Security, UI Settings, and System Settings. The "Scene & Automation" section has a sub-menu with "Scenes" and "Triggers". At the top right, there are language ("English"), user ("webAdmin"), and a dropdown menu. A progress bar at the top indicates "Step 1" (New Scene), "Step 2" (Add/Update Action Group), "Step 3" (Configure Actions), and "Step 4" (Configure Actions Detail). A "Save" button is located at the top right of the main content area. The main content area is titled "Scene Wizard Step 4" and "Configure Actions Detail". It shows a form with fields: "Scene" (New Scene), "Icon" (Icon 1), "Room" (Saloon), and checkboxes for "Favorite" (checked), "Invisible" (unchecked), and "Modifiable" (checked). Below the form is a button "+ Add Action Group". At the bottom, there's a table with columns "Delay" (2 sec delayed) and "Action Count" (5 actions), along with "Actions" icons (edit and delete). The footer of the interface includes the text "2020 © Core - v3.2.88".

Scene Wizard Step 4

Only one Action Group can be added to a specific delay time.

8.3. EDITING SCENES

You can edit previously added scene from Programming Interface. To do this:

- Go to Scenes&Automation > Scenes
- Click  button in the operations column of the scene you want to edit.
- Scene wizard will appear. Here you can edit desired information of the scene.

8.4. DELETING SCENE

You can delete a previously created scene from Programming Interface. To do this:

- Go to Scenes&Automation > Scenes
- Click  button in the operations column of the scene you want to delete.
- Scene will be deleted after confirming delete process in the confirmation box.

The screenshot shows the CoreOS 4.0 Web Interface with the 'Scenes' section selected. The interface includes a sidebar with various menu items like Dashboard, Devices, Intercom, Scene & Automation, Scenes, Triggers, Security, UI Settings, and System Settings. The main content area displays a table of scenes with columns for Icon, Name, Room, Favorite, and Actions. Two scenes are listed: 'Goodbye' and 'Welcome', both associated with the 'Saloon' room and marked as favorites. Each scene has edit and delete icons in the Actions column.

Icon	Name	Room	Favorite	Actions
	Goodbye	Saloon		 
	Welcome	Saloon		 

9. TRIGGERS

9.1. INTRODUCTION

Trigger is the act of performing actions when one or more predefined conditions are met. Actions and conditions are defined by integrator in Programming Interface.

Trigger Samples

- Turn on garden lights when every day at 19:00.
- Send push notification when fire alarm occurs
- Turn off Heat Pump, when underfloor heating 1 and heating zone 2 is Off.

Types of Conditions:

- Accessory Status based:
 - On/Off state of all switch accessories
 - On/Off and Brightness level of dimmer accessories
 - Position of Shutter Accessories
 - Room and Target Temperature of Thermostat accessories
 - Trigger and violation status of Sensor Accessories
- Security System Status and Modes based:
 - Arming away status
 - Arming stay status
 - Armed away mode
 - Armed stay mode
 - Disarmed mode
 - No violation status
 - Entry & Exit countdown status
 - Burglar alarm status
 - Fire alarm status
 - Smoke alarm status
 - Leak alarm status
- Intercom System based:
 - Incoming call from a contact
 - Outgoing call to a contact
- Application status and doorbell based
 - Doorbell is triggered
 - Application exit from screen saver mode
- Time based
 - Every hour at specified minute
 - Every day at specified time
 - Every week at specified day at specified time
 - Every month at specified day at specified time

- One time at specified date and time in calendar

Action Types:

- Accessory based
 - On/Off
 - Dim level
 - Position level of Shutter
 - Setpoint temperature and modes of thermostat
 - Run Binary button and punch button
- Sending value to group address of KNX bus
 - Send a specific value to KNX group address

It is useful to send data to KNX bus line after a condition has been met.

Example: Switching all thermostats from heating to cooling mode on a specified date

Example: All KNX devices switch into alarm mode in case of security alarm

- Run a scene
- Change security system mode (disarm, arm stay, arm away)
- Dial an intercom call to a contact
- Send HTTP command
- Send Push Notification to Core Mobile App

Example: Send "Security System disarmed" notification when security system is disarmed

Example: Send push notification when water valve is turned off.

- Add delay between actions

9.2. ADDING A NEW TRIGGER

In this section, you can add a trigger to Touch Panel with CoreOS 4.0 operating system. To do this:

- Go to Scenes&Automation > Triggers
- Click button
- Add Trigger wizard will appear
- Enter the name of trigger
- Click When button to add a condition.

Name

WHEN

Security Mode Equals To

THEN

For example: Turn on the environmental lighting, turn off after 60 seconds

- Choose time or accessory based condition

Your Smart Home can automatically perform many actions for you. Say what you want to do and your smart home will do it for you. Please start the configuration by choosing one of the available trigger types below

Device Oriented

Includes trigger types such as accessory status changes, intercom calls, and security mode change

Schedule Oriented

Includes types triggered periodically at a specific time or according to sunrise and sunset

- You can add multiple condition. You can combine conditions with AND and OR logical gates.

- Click  button after all conditions are added
- Click Then button to add action

- You can add multiple actions to condition.

- Click  button after all actions are added.
- Click  button after all information are set for trigger.

 After adding a trigger, it is possible to make it visible or invisible on Touch Panel UI. Sometimes making a trigger invisible is good for end user experience. Thus, End user does not need to know a complicated trigger which works for end user's comfort.

 The visible triggers created by integrator can not be edited on Touch Panel UI. End user can only get informations about the trigger. However, end user can edit a trigger created on Touch Panel UI.

i The triggers created by end user appears on web interface. So when the back up is exported, back up file includes those triggers too.

! If a trigger created by end user is edited via web interface, it can not be edited on Touch Panel UI anymore.

CORE SMART HOME

CoreOS 4.0 Web Interface

English webAdmin

Name	Condition	Actions	Execution Date	Visible	Actions
Yard Lights On	0 hour(s) 5 minute(s) after sunset on weekdays	Turn on Back Lights, Turn on Front Lights, Send Push Notification (CoreOs4 Yard On, Yard Lights On)	27.10.2023 18:23:00	<input checked="" type="checkbox"/>	
Yard Lights Off	0 hour(s) 5 minute(s) before sunrise on weekdays	Turn off Back Lights, Turn off Front Lights, Send Push Notification (CoreOs4 Yard Off, Yard Lights Off)	30.10.2023 07:30:01	<input checked="" type="checkbox"/>	
Welcome Scene Running	Scene Running Equals To Welcome	Send Push Notification (Core Smart Home, Welcome scene is running)		<input checked="" type="checkbox"/>	
Alarm Mode Disarm	Security Mode Equals To Disarmed	Send Push Notification (Core Smart Home, Security Mode is disarmed now!)		<input type="checkbox"/>	

2020 © Core - v3.2.88

9.3. EDITING TRIGGERS

You can edit previously added triggers in Programming Interface. To do this:

- Go to Scenes&Automation > Triggers
- Click  button of the trigger you want to edit in the actions column.
- Trigger wizard will appear. Here you can edit any information of the trigger

9.4. DELETING TRIGGERS

You can delete previously added triggers in Programming Interface. To do this:

- Go to Scenes&Automation > Triggers
- Click  button of the trigger you want to delete in the actions column.
- Trigger will be deleted after confirming delete process in the confirmation box.

10. INTERCOM

10.1 INTRODUCTION

Touch Panels with CoreOS 4.0 operating system offer IP Based intercom calls using SIP 2.0 communication protocol. Highlights:

- SIP 2.0 peer-to-peer intercom calls can be generated without need of SIP Server.
- Touch Panels can be added as a user to SIP Server, if a SIP Server is used in the project
- Automatic Contacts synchronization
- Shortcut functions available during calls
- Do not disturb mode
- Detailed view of call history
- Forwarding of incoming calls coming to Touch Panel to mobile app when call is not responded in a specified period

Automatic Contacts Synchronization

Touch Panels with CoreOS 3.0 operating system can recognize each other with multicasting technology when connected to same local network. In this way, Core Touch Panels automatically registered to each other's contacts. It facilitates commissioning process, especially in large scale residential projects.

 Multicasting: It is a technology of transporting an information to more than one point using the least bandwith.

 There should be no special configurations on the network to block multicasting packets (such as firewall or special router configurations)

10.2 INTERCOM SETTINGS

This is the section where intercom settings of Touch Panel are configured. To do this:

- Go to Intercom > Intercom Settings
- Enter the name you want Touch Panel to be displayed in the contacts of other Touch Panels
- If you want Touch Panel to be displayed in Contacts of other Touch Panels, you can turn-on "Automatic Contact Synchronization".
- Click  button to save changes.

SIP Server Settings (If A SIP Server is used):

- Enter IP address of SIP Server
- Select Transport type
- Enter username and password created for Touch Panel on SIP Server.

The screenshot shows the CoreOS 4.0 Web Interface with the 'Intercom Settings' page selected. The left sidebar has 'Intercom Settings' highlighted. The main area contains two sections: 'Basic Settings' and 'SIP Server Settings'. In 'Basic Settings', there is a 'Display Name' input field and a toggle switch for 'Enable Automatic Contact Synchronization'. In 'SIP Server Settings', there is a 'Sip Server Enabled' toggle switch, a 'Sip Server' input field with a port number (5060), a 'Transport Type' dropdown set to 'UDP', and fields for 'Username' and 'Password'. A blue footer bar at the bottom displays '2020 © Core - v3.2.88'.

10.3 ADDING NEW CONTACT

It is the section where contact is added to intercom contacts of Touch Panel. To do this:

- Go to Intercom > Contacts
- Click button to add a new contact.

The screenshot shows the CoreOS 4.0 Web Interface with the 'Contacts' page selected. The left sidebar has 'Contacts' highlighted. The main area displays a table of contacts with columns: Icon, Name, Contact Type, Favorite, Shortcut, Intercom Actions, and Actions. Two contacts are listed: 'Doorbell' (akuvox) and 'Reception' (custom). Each contact has a green circular 'Edit' button, a blue 'Copy' icon, and a red 'Delete' icon in the 'Actions' column. A blue footer bar at the bottom displays '2020 © Core - v3.2.88'.

Intercom Contacts Page

- On the opening page, enter name, icon and IP address of the Contact.
- Choose Contact Type.
- If contact is an outdoor station and has a camera, enter RTSP and Snapshot URL.

i RTSP URL is used to display camera before call is answered when a call received from outdoor station.

i When the call is answered, video received from RTSP URL is interrupted and video and audio are received over SIP protocol.

i Snapshot URL is used to display the picture of visitor at missed calls in call history.

- If you want to add an action for contact, click add action button. Action types that can be added are DTMF command, HTTP request and an accessory action of CoreOS operating system. These actions can be used during call with the contact.
- If you want to use these actions without call, you can mark them shortcut. In this case, action is displayed in the Intercom Shortcuts Widget on the dashboard of user interface.
- Click  button to save changes.

CoreOS 4.0 Web Interface

Edit Contact

Name: Doorbell

Number / IP Address: 10.0.1.29

Icon: Icon 4

Contact Type: Akuvox

RTSP Url: rtsp://admin:admin@10.0.1

Username: Type a username

Password: Type a password

Shortcut:

Action:

- Action Type: HTTP
- Action Value: Open Door
- URL: http://10.0.1.29/cgi/do?action=OpenDoor&UserName=%s

Add Action

Intercom Contacts Add / Edit

Contact Type: Custom

- This type of contact is used when it is wanted to receive video from an external source.
- By checking "Display camera view on call", the video received during the call will continue via RTSP URL

The screenshot shows the CoreOS 4.0 Web Interface with the title "Edit Contact". The left sidebar has a "CORE SMART HOME" header and lists various sections: Dashboard, Devices, Intercom, Intercom Settings (which is currently selected), Contacts, Scene & Automation, Security, UI Settings, and System Settings. At the top right, there are language ("English"), user ("webAdmin"), and upload ("Upload") buttons. The main content area is titled "Edit Contact" with a back button. It contains fields for Name (Reception), Number / IP Address (10.0.1.165), Icon (Icon 1), Favorite (on), Contact Type (Custom), Shortcut (off), RTSP Url (rtsp://admin:admin@10.0.1), Snapshot Url (http://admin:admin@10.0.1), Username (Type a username), Password (Type a password), and a toggle for "Display Camera View On Call" (on). A blue "Add Action" button is at the bottom. The footer says "2020 © Core - v3.2.88".

10.4. EDITING CONTACTS

In this section, you can edit previously added contacts. To do this:

- Go to Intercom > Contacts
- Click  button of the contact you want to edit in operations column
- You can edit contact information on this page.

10.5. DELETING CONTACTS

In this section, you can delete previously added contacts. To do this:

- Go to Intercom > Contacts
- Click  button of the contact you want to delete in operations column
- Contact will be deleted after confirming delete process in the confirmation box.

10.6. CALL ON MOBILE

Touch Panels with CoreOS 3.0 operating system offer the opportunity to forward incoming calls to mobile phones via the mobile application if the incoming calls are not answered on the touch panel within the specified time.

To activate call on mobile:

- Go to Intercom > Call On Mobile page.
- Activate Call On Mobile.
- Determine how long after call forwarding will be made according to the security mode.

- Go to Settings > Call on Mobile on Core Mobile Application and activate it.

11. SECURITY PANEL

11.1. INTRODUCTION

You can control and monitor sensors and IP Cameras you have defined on Touch Panel and receive push-notifications with advanced Security Panel in CoreOS 4.0.

i You can also add KNX Sensors to Security System as you can connect security sensors to digital inputs of Touch Panel.

i To play Touch Panel siren when violation occurs, it should be activated in Integrator menu. It is deactivated by default. See [Integrator Menu](#)

Three different Security modes are defined to control sensors defined on Touch Panel:

- Arm Away
- Arm Stay
- Disarm

Security sensors can be defined in different types in CoreOS 4.0. operating system:

- Motion Sensor
- Door Sensor
- Window Sensor
- Leak Sensor
- Gas Sensor
- Smoke Sensor

11.2 ADDING NEW SENSOR

A new sensor can be added in devices section

- Add a new accessory.
- Select the related driver.
- If accessory type is selected as sensor, accessory will be displayed in security panel menu.

11.3 SECURITY PANEL SETTINGS

Panel Settings

Security Panel settings are configured in this section. To do this:

- Go to Security > Panel Settings
- Enter Exit Delay as secs.
- If you want to hear countdown notification while security panel is arming away, turn on "Arm away sound"
- If you want to hear countdown notification while security panel is arming stay, turn on "Arm stay sound"
- If you want to hear warning notification of waiting password status, turn on "Entry delay sound".
- Enter sound level for security notifications between 0-100.
- Click Save to save changes.

The screenshot shows the 'Panel Settings' screen with the following configuration:

- Exit Delay:** 15
- Arm Away Chime Feedback:** Enabled (switch is on)
- Arm Stay Chime Feedback:** Enabled (switch is on)
- Entry Delay Chime Feedback:** Enabled (switch is on)
- Chime Level:** 100

A 'Save' button is located in the top right corner.

Arming Settings

In this section, arming status of sensors are determined via security system modes. To do this:

- Go to Security > Panel Settings
- Select in which security system mode the sensors will be armed.

- i** Arming sensor 24/7 means sensor is always armed in Armed away, Armed stay and also disarmed modes.
- Different entry delays can be defined for each sensor. For this, Entry delay value in the sensor list must be entered in seconds.
 - Click save to apply changes.

The screenshot shows the 'Arming Settings' table with the following data:

Icon	Name	Category	Armed in Stay Mode	Armed in Away Mode	7/24 Mode	Entry Delay
	Gas Sensor	Sensor Gas	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="button" value="-"/> 0 <input type="button" value="+"/>
	Leak Sensor	Sensor Leak	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="button" value="-"/> 0 <input type="button" value="+"/>
	Motion Sensor	Sensor Motion	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="button" value="-"/> 10 <input type="button" value="+"/>
	Window Sensor	Sensor Window	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="button" value="-"/> 10 <input type="button" value="+"/>

Settings to be made on Touch Panel UI

The password for the security system must first be set on the Touch Panel UI. For this:

- Go to Touch Panel UI > Settings > Security
- Enter the password which has been determined in the Password section and press the save button.

- Activate the options you want to use the password you set.

11.4 ADDING IP CAMERA

A new IP Camera is added to Touch Panel in this section. To do this:

- Go to Security > IP Cameras
- Click  button
- In the opened page, enter name, icon and room of Camera.
- For the cameras with snapshot feature, enter Snapshot URL, username and password in order to take picture from IP Camera.
- Enter RTSP URL of Camera to get image.
- Turn-on Display in Mobile Application button to display IP Camera image from Core Mobile App. Enter required IP settings to do this.
- Click Add Action button to perform an action while watching IP Camera. Action types are DTMF command, HTTP request, and an accessory action of CoreOS operating System.

The screenshot shows the CoreOS 4.0 Web Interface with the following details:

- Sidebar:** CORE SMART HOME, Dashboard, Devices, Intercom, Scene & Automation, Security, **IP Cameras** (highlighted), Panel Settings, UI Settings, System Settings.
- Header:** CoreOS 4.0 Web Interface, English, webAdmin.
- Form Fields:**
 - Accessory Name:** Type Accessory Name
 - Icon:** Icon 24, camera icon
 - Room:** Saloon
 - Snapshot:**
 - Url:** Type a snapshot url
 - Username:** Type a username
 - Password:** Type a password
 - RTSP Stream:**
 - Local Url:** Type a local url
 - Display On Mobile:** Toggle switch (off)
- Buttons:** Add Action, Save.
- Footer:** 2020 © Core - v3.2.88

The screenshot shows the RTSP Stream configuration page with the following details:

- Local Url:** rtsp://admin:admin@10.0.1.161:554/can
- Display On Mobile:** Toggle switch (on)
- * External Url:** rtsp://admin:admin@80.181.182.83:554/
- Enable Dynamic IP:** Toggle switch (off)

! To display camera view on Core mobile app, either internet access should have a static public IP and necessary port forwarding must be done on modem or router or without a static public IP, "Enable Dynamic IP" must be checked and necessary port forwarding must be done on router or modem

- If internet access has a static public IP and necessary port forwarding have been made, RTSP URL with the static public IP and forwarded port must be entered in "External URL" section.
- If internet access doesn't have a static public IP and necessary port forwarding have been made, RTSP URL with the current public IP and forwarded port must be entered in "External URL" section and "Enable Dynamic IP" must be checked. Core Mobile App will attempt to access camera view via Core Cloud.

12. INTEGRATOR MENU

12.1. ACTIVATION OF INTEGRATOR MENU

The integrator menu is a hidden menu. to activate it:

- Go to Touch Panel UI > Settings > App Settings.
- Tap 4 times to App Version
- Enter Integrator Password in pop-up window. (Default integrator password is 1234)

12.2. FUNCTIONS

The functions in the integrator menu are as follows:

- ETH0 Ethernet interface can be configured as static IP.
- Siren of the Touch Panel can be activated in case of sensor violations.
- Horizontal or vertical operation of the Touch Panel can be selected.
- The Touch Panel can be restarted.
- The Touch Panel can be reset to factory settings.

13. ADDING USER FOR MOBILE APPLICATION

Touch Panels with CoreOS 4.0 operating system offer the opportunity to control the automation system from the mobile application, via CoreOS Cloud system. For this, a user must be defined on the Touch Panel.

To Add a user:

- Go to Touch Panel UI > Settings > Remote.
- Press the + button on the right side of the Touch Panel. You can add an existing user or a new user in the window that appears.

- To add a new user; enter the user's e-mail address (to be used to reset the password), a specific username and password, and click the "Create" button.
- If you want to add a previously created user to the Touch Panel; click add existing user and enter the user name, then click the "Add" button.

Login to mobile application must be done with the **USERNAME**

14. KNX IP INTERFACE

Thanks to the outstanding work of the Core R&D team, with the KNX IP Interface feature added to Core Touch Panels, it is now possible to program KNX both from the local network and from anywhere via Core Cloud—without requiring VPN setup or external hardware.

14.1 LICENSING

To use the KNX IP Interface feature, the Touch Panel must have a KNX IP Interface license.

Licenses purchased from Core are automatically loaded into your Online Portal account and can be viewed under the Licenses menu. To get more information about Core Online Portal, see [Dealer Portal tutorial videos](#) on our youtube channel.

License Type	Total Count	Used Count	Available Count	Attachment
KNX IP Interface	2	2	0	CoreRemoteAccess-1.0.1.6.exe

- The integrator can assign the uploaded licenses to desired Touch Panels/devices through the Online Portal. To assign a license
 - Go to devices menu in online portal
 - Click assign button

CR-ECP-10-K
NX-STG 4.0.14

- Select license and confirm

Your Notes

Once a license is assigned, you cannot take it back

Select a license

KNX IP Interface (3)

- If a license is assigned to a Touch Panel, it will appear in the Licenses column.

- Once a license is assigned to a Touch Panel, it cannot be removed or reassigned to another Touch Panel.
- Touch Panels with assigned licenses can use the KNX IP Interface feature both via local network and remote connection.

14.2 REMOTE CONNECTION

With the Core Remote Access software downloadable from your portal account, you can easily and securely activate the KNX IP Interface feature of the Touch Panel you want to connect to. This software will automatically create a bridge between your PC and the Core Touch Panel via the Core Cloud system, managing necessary operations in the background.

- When you click the KNX Remote button next to the screen you want to connect to remotely, the Core Remote Access software will automatically activate, and the KNX IP Interface feature will be enabled through the Core Cloud.

For this feature to work, remote access permission on the relevant screen must be active.

A screenshot of the Core interface showing a list of touch panels. The columns are 'Version', 'Notes', 'Knx Remote', and 'Operations'. The 'Operations' column contains a red minus sign icon. Below the table, there are four green circular icons with white symbols: an up arrow, a plus sign, a document with a plus sign, and a downward arrow. At the bottom, there is a navigation bar with 'Total 3', '20/page', and page numbers, followed by a Windows PowerShell window showing the command 'DFHAZ72R785C Status STARTED'.

- Once the KNX IP Interface feature of the Core screen is active, simply open your project in ETS and add an IP Tunneling as the Bus interface to establish a remote connection.

- Core Remote Access software creates the bridge between your ETS program and the Core screen via Core Cloud. Therefore, your PC's IP address will be used as the IP Tunneling server address.
- Settings are:
 - Server: Your PC's IP address
 - Port :3671
 - IP protocol: UDP
 - NAT Modu: Active

Manage Configured Connections

A configured connection is necessary if ETS cannot detect the bus interface automatically, either because the network does not support IP Multicast, or the interface is behind a NAT router (*), or the interface uses the EIBlib/IP protocol.

⚠ (*) Warning: Exposing a KNX interface to the public internet is a major security risk! Act responsibly and allow access only via a secure channel (VPN) instead.

- Now, with the bus interface you have added, you will be connected to the KNX bus line of your remote project via the Core Touch Panel.
- You will be able to perform KNX programming and diagnostics such as group monitoring and bus monitoring.

14.3 LOCAL CONNECTION

For Touch Panels with license assignment and application version 4.0.14 or higher, the KNX IP Interface feature can be activated through the web interface as usual.

Path:
System Settings > General > KNX Settings.

The screenshot shows the CoreOS 4.0 Web Interface. On the left, there is a sidebar with various settings: Dashboard, Devices, Intercom, Scene & Automation, Security, UI Settings, System Settings (which is selected), Import/Export, General (which is highlighted), Network, RSS Settings, and Security. The main content area has three sections: Camera Preview (with a toggle switch turned on), Date Time Settings (with a GMT dropdown set to Europe/Istanbul (+03:00)), and KNX Settings. In the KNX Settings section, there is a 'Source Address' input field containing '15.15.254' and a 'KNX IP Interface' toggle switch labeled 'STARTED'.

Once KNX IP Interface is active, the Touch Panel will automatically appear in the ETS Bus interfaces list.

By selecting the Core Touch Panel as the Bus interface, you can perform operations such as program upload, group monitoring, and bus monitoring.

14.4 TOUCH PANEL USAGE

When KNX IP Interface is active:

- A warning window appears on the Touch Panel.
- An icon shows at the top indicating the feature is active.
- To prevent issues when left open, the KNX IP Interface automatically turns off after 30 minutes. If you need to continue operations, you must re-enable it.

- The Touch Panel stops the KNX TP driver and does not allow controlling KNX accessories assigned to the Touch Panel.
- Other drivers and accessories assigned to the Touch Panel (e.g., intercom) remain fully functional.
