1. PRESENTATION

Core KNX-GREE Gateway allows monitoring and control of Gree Split air conditioners via KNX Systems.

1.1. DIMENSIONS

1.2. MAIN FEATURES

- Reduced dimensions of 68.5mm x 49mm x 19.7mm, it can easily fits inside the indoor units. With the cable that comes with the device, quick and faultless installation can be done.
- Can be configured with the standard ETS application.
- With different KNX DPT (Bit, Byte) objects, it can work in harmony with most of the KNX thermostats in the market.
- Indoor unit's setpoint temperature, operation mode, fan speed, vane controls, ... functions can be controlled bidirectionally, and their status can be monitored.
- More efficient air conditioning can be achieved by sending the ambient temperature provided by product groups such as thermostats, switches, etc. containing ambient temperature sensors to the indoor unit.
- Error codes on the indoor unit can be reported.
- With the help of fixing apparatus and internal magnets that come with the device, precise installation can be done.
- To prevent wrong or faulty connections, industrial grade connector type is selected with pin-matching structure.

2. DEVICE CONNECTION AND CONFIGURATION

2.1. CONNECTION

The device comes with a cable for direct connection to the related terminals of the Air Conditioner Indoor Unit.

! The device should not be connected to the air conditioner with any cable rather than the one that comes with it.

Connection to the Indoor Unit:

- Disconnect the main power from the AC unit.
- Open the internal controller board.
- Find the **COM-MANUAL** terminals
- Connect the white connector on the installation cable supplied with the device to the COM-MANUAL connector on the air conditioner, and the black connector to the A/C Unit connector of the device.

! Cutting the cable, shortening it or making any other physical modifications may cause the device not to work properly.

Connection to the KNX Bus:

- Disconnect power of the KNX bus.
- Connect to the KNX TP-1 (EIB) Bus Line using the device's standard KNX connector (red/black), respect polarity.
- Reconnect power of the KNX bus.

3.4.2 AVAILABLE FAN SPEEDS IN INDOOR UNIT

Available Fan Speeds in Indoor Unit	5 <input type="button" value="▼"/>
-------------------------------------	------------------------------------

Number of different available speed values defined for fan control can be selected via this parameter. The number of related group objects and their settings are updated according to this parameter.

 For detailed information about Fan Speed values supported by your indoor unit, please review your product manual.

3.4.3 FAN SPEED DPT OBJECT TYPE

With this parameter, DPTs of Byte type group objects used in fan speed control can be changed. It is possible to switch between Scaling (DPT_5.001) and Enumerated (DPT_5.010) data types.

Since the Byte type group objects related to Fan Speed are the same, the values they accept will vary according to the selected fan speed steps and DPT. For example, when Fan Speed steps are selected as '3' and data type is selected as Enumerated (DPT_5.010), values '1', '2' or '3' will be accepted as Fan Speed. In the same scenario, when '0' is sent, the minimum Fan speed value will be treated as '1' (If Auto Fan Speed is not selected) and when a value greater than '3' is sent, the maximum Fan speed value will be treated as '3'.

When Scaling (DPT_5.001) is selected as DPT, Byte type Control_Fan_Speed and Status_Fan_Speed objects will appear as specified depending on the selected Fan Speed steps.

 19	Control Fan Speed / 3 Speeds [DPT 5.001 - 1byte]	0-Auto, Threshold: 50%, 83%	1 byte	percentage (0..100%)
 20	Status Fan Speed / 3 Speeds [DPT 5.001 - 1byte]	0-Auto, 33%, 67%, 100%	1 byte	percentage (0..100%)

Table containing the ranges that can be sent to the Control_Fan_Speed object for each Fan Speed of the Scaling (DPT_5.001) data type and the return values of the Status_Fan_Speed object is given below.
